1 Introduction

Command Center RX (Remote eXtension), which will hereafter be referred to as the embedded server, refers to the web server that is built into the printing device. It allows you to verify the operating status of the device and make settings related to security, network printing, E-mail transmission and advanced networking.

With the embedded server, the administrator can remotely track paper and toner usages per user and the status of optional equipment installed. The embedded server also configures device settings, monitors jobs, and manages document boxes and address books.

System Requirements

The embedded server operates in the following environment. Check the following before use.

Protocol

- The TCP/IP protocol is installed on the PC.
- An IP address is assigned to the printing system.

Web browser

- Microsoft Internet Explorer 9.0 or later (Microsoft Internet Explorer operates on Microsoft Windows XP/ Vista/7/8/8.1, and Microsoft Windows Server 2008/2012.)
- Microsoft Edge (Microsoft Edge operates on Microsoft Windows 10.)
- Mozilla Firefox 14.0 or later
- Safari 5.0 or later (Safari operates on Apple Mac OS X 10.4 or later.)
- Google Chrome 21.0 or later

Accessing the Embedded Server

Access the embedded server by entering the printing system's host name or IP address in a web browser. Obtain the IP address from your network administrator.

Note: Do not access to other web sites for security reasons while operating the Command Center RX.

1. Open a web browser.

2. Enter the device's host name or IP address as the URL. If you use the host name, you must first specify the DNS server information. For example, https://192.168.10.1.

If the screen “There is a problem with this website's security certificate.” is displayed, configure the certificate. For details, see Certificates on page 83. You can also continue the operation without configuring the certificate.

The embedded server's home page will be accessed and displayed.

For initial login, use the predefined “Admin” as the Use Name, and “Admin” as the Password to access all the pages. For initial login, use the predefined Admin as the Use Name, and Admin as the Password to access all the pages. This is set up internally.
The embedded server's home page allows you to select a category from the navigation menu on the left to view and set values for that category, as well as displaying information on the device, user, and consumables on the right, which changes according to the selection in the navigation menu.

Login

To fully access the features of the embedded server pages, enter the User Name and Password and click Login. Entering the predefined administrator password allows the user to access all pages, including Document Box, Address Book, and Device Settings on the navigation menu.
The Embedded Server Home Page

To access the embedded server pages, the users can be identified by choosing one of network authentication, local authentication, and job accounting authentication methods. For details, see 3 About Login Levels of Login on page.

Top Bar

At the top of the home page, you can perform the following:

Home

To quickly return to this home page (top page) from any other server page, click Home.

Select language

The embedded server supports multiple languages. To change the language that the embedded server is displayed in, open the language drop down list and select the appropriate language. If you attempt to view the embedded server with a character set other than the language that is used on the operation panel's display, some characters may be garbled.

Auto-refresh

To continuously update the embedded server's pages to the most recent status, select the Auto-Refresh check box.

Note: If checking [Auto-refresh] check box, the login state continues without the automatic logout. Do not check [Auto-refresh] for the safe connection.

Refresh

Click this circular arrow icon to refresh the embedded server pages any time.
Navigation Menu

The navigation menu at the left of the home page divides the following functions onto separate bars. By clicking each bar, you can jump to the desired page as outlined below:

My Information/User Properties

My Information or User Properties is accessible when you have logged in to the embedded server with a general user or administrator privilege, and user authentication is enabled. This page summarizes the general settings to which access is granted by the general user. This depends on the scope of the user's or group's privileges. For example, if a user is allowed access to the document box, he/she can add or delete documents in the document box shown in My Information.

Device Information

This page includes this machine's various information. After clicking on Device Information, information is available in the following device information pages:

Configuration

This page includes this machine's various information that apply to the entire machine, such as Device Defaults (basic, ID information, and capability) as well as optional equipment installed, firmware, network parameters, and FAX parameters.

Counter

This page includes the printed pages and scanned pages. You can narrow details by pulling down Type.

About Command Center RX

This page includes the firmware version and the list of web browsers supported by the embedded server.

Job Status

This page includes information on all device jobs including job status for printing, scanning, storing, and scheduled jobs as well as the job log. After clicking on Job Status, information is available in the following job status pages: The displayed items vary depending on the access level.

Printing Job Status, Sending Job Status, Storing Job Status

Displays details on each job. You can narrow details by pulling down Type. Click Refresh to update the list. Click Cancel Job to abort the job. To see details of each job in the log, click the Number or the Job Name.

Scheduled Jobs (when FAX is installed)

This page is populated with FAX jobs currently scheduled for transmission. Click Refresh to update the list. Click Cancel Job to remove the FAX job from the list to abort.

Printing Job Log, Sending Job Log, Storing Job Log

Displays logs to track jobs of each type. You can narrow details by pulling down Type. Click Refresh at the right end of the Top Bar to update the list of logs. To see details of each job in the log, click the Number or the Job Name.

Document Box

This page allows you to add, edit, or delete a document box, and delete documents in a document box. This page allows you to add, edit, or delete a document box, and delete documents in a document box. Under Document Box, Custom Box.
Fax Box, Sub Address Box, Polling Box, and Job Box Settings are included. For more information, see Document Box on page 9.

Address Book

This page allows you to add, edit, or delete a contact address or a group of addresses. Under Address Book, Machine Address Book, External Address Book Settings, and One Touch Key are included. For more information, see Address Book on page 17.

Device Settings

This page includes advanced settings that apply to the entire device. Under Device Settings, Paper/Feed/Output, Original Document, Energy Saver/Timer, Date/Time and System are included. For more information, see Device Settings on page 22.

Function Settings

This page includes advanced settings of each function that the device has. Under Function Settings, Common/Job Defaults, Copy, Printer, E-mail, Scan to Folder, DSM Scan, FAX/i-FAX, Send and Forward, RX/Forward Rules, and Operation Panel are included. For more information, see Function Settings on page 31.

Network Settings

This page includes advanced network settings that apply to the device. Under Network Settings, General, TCP/IP, and Protocol are included. For more information, see Network Settings on page 57.

Security Settings

This page includes advanced security settings that apply to the device. Under Security Settings, Device Security, Send Security, Network Security, and Certificates are included. For more information, see Security Settings on page 76.

Management Settings

This page includes advanced management settings that apply to the device. Under Management Settings, Job Accounting, Authentication, ID Card, Notification/Report, History Settings, SNMP, System Stamp, Message Board, and Reset are included. For more information, see Management Settings on page 85.

Links

Links to our websites. Visit the following website for more information and downloads.

Download Drivers and Software
For downloading printer drivers and software:
KYOCERA Document Solutions - Download
http://www.kyoceradocumentsolutions.com/download/

About KYOCERA Document Solutions
For more information about products:
KYOCERA Document Solutions Website
http://www.kyoceradocumentsolutions.com/
HyPAS Applications
The link information is displayed when the HyPAS applications are installed and configuring their settings.

Network options
When the optional network interface kit (IB-50 or IB-51) is attached to the machine, the link information to web page of IB-50 or IB-51 is displayed.

Device Status

The home page displays information on the status of the device, operation panel usage, and consumables, to the right of the page. This page allows you to quickly verify the device's current settings and statuses.

Status Displays
Shows the operating status of the printer, scanner, and/or FAX.

Operation Panel Usage
Shows the user currently logged in to the device from the operation panel and its operating status. Note that settings made using the operation panel may override those made using the embedded server.

Paper
Shows the size, type, maximum capacity, and the current supply by paper source.

Toner
Shows the toner supply by color. The status of the waste toner box is also shown.

Staple/Punch
Shows the amount of the remaining staples and the punch waste.

Information
Shows the message type, title and date modified when the Message Board is set to On and the new message is described.
3 About Login

This section provides information to help the administrator manage domain and local users. The administrator can set authentication that allows the predefined users to access the embedded server pages and set administrator passwords.

Levels of Login

An administrator can configure the device to require a user login before it is accessed, in either of three different ways of authentication as described in this section.

If you select local or network authentication, User Login must be turned on.

The default user name and password, or the local administrator account when User Login is turned off, is Admin.

Local Authentication

Users are registered in this device and one-to-one authentication is performed between this printing system and a PC. A local account user accesses the embedded server by entering a User Name and Password and selecting Local in the drop-down list (if shown) below the entries, followed by clicking the Login button.

A user logged in with administrator privileges can gain access to My Information, Device Information, Job Status, Document Box, Address Book, Device Settings, Function Settings, Network Settings, Security Settings, Management Settings, and Links on the navigation menu.

A user logged in with a general user account cannot add or delete document boxes, nor view the Address Book, Device Settings, Function Settings, Network Settings, Security Settings, and Management Settings.

To add, delete or configure a locally authenticated user, see Authentication on page 87.

Network Authentication

If the device is configured for network authentication, the device and the relevant PC's need to be under the management of a Windows domain network. Select the domain you want to login to in the drop-down list, enter a User Name and Password, and then click the Login button.

A user logged in with administrator privileges can gain access to My Information, Device Information, Job Status, Document Box, Address Book, Device Settings, Function Settings, Network Settings, Security Settings, Management Settings, and Links on the navigation menu.

A user logged in with a general user account cannot add or delete document boxes, nor view the Address Book, Device Settings, Function Settings, Network Settings, Security Settings, and Management Settings.

To add, delete or configure a network authenticated user, see Authentication on page 87.
Authentication Using Job Account ID

If the device is configured for job accounting but not for User Login, a user can be authenticated by his/her job account ID. Enter the job account ID in Account Login and click Login.

Note: If a user is registered as an Administrator on the Local User List, click Admin Login. Enter a User Name and Password and click the Login button.

For access using a job account ID, My Information, Device Information, Job Status, Document Box, Address Book, and Links are displayed in the navigation menu.
4 Document Box

This page is accessible when you have logged in using a general user or administrator account. It allows you to add or delete a document box, as well as deleting documents in a document box. A general user is not allowed to add or delete a document box.

There are several types of document boxes, which vary depending on models: **Custom Box**, **FAX Box**, **Sub Address Box**, **Polling Box**, and **Job Box Settings** as described below. Note that **FAX Box**, **Sub Address Box**, and **Polling Box** are available only if the device is equipped with a FAX kit.

The users with a general user account can delete the documents which were created and added in their own document boxes.

**Custom box**

The section below explains how to add, edit or delete custom boxes as well as working with their contents.

**Adding a New Custom Box**

1. Click **Custom Box** under **Document Box** on the navigation menu. The **Custom Boxes** page opens.
2. Click **Add** icon. The **New Box - Property** page will open.
3. Make entries required to define the custom box, such as **Number**, **Name**, etc.
4. Click **Submit** button.

**Editing a Custom Box**

1. Click **Custom Box** under **Document Box** on the navigation menu. The **Custom Boxes** page opens.
2. Select the custom box you want to edit by clicking on its Number or Box Name. The documents contained in the custom box are displayed with its name, date of creation, size, etc. You can choose **List View** or **Thumbnail** to view the box contents.

   Alternatively, you can open the list of the user boxes, directly enter the box number in the **Box #** window and click **Go to**, or enter the box name in the **Box Name** window and click the magnifying glass icon, to quickly search the custom box.
3. Click **Box Property**. The **Property** page will appear.
4. Make entries required to modify the custom box properties such as **Number**, **Name**, etc.
5. Click **Submit** button.

**Working with a Custom Box**

You can delete, move, copy, join, download, E-mail or print documents in the custom box.
First select the document to apply any of the above actions by following the steps below:

1. Click Custom Box under Document Box on the navigation menu. The Custom Boxes page opens.

2. Select the custom box you want to work with by clicking on its Number or Box Name. If the box is password-protected, enter the password. The documents contained in the custom box are displayed with its name, date of creation, size, etc. You can choose List View or Thumbnail to view the box contents.

To search the document in the custom box, you can open the custom box, enter the document name in the File Name window and click the magnifying glass icon.

3. In the custom box, select the check box next to the name of the document that you want to apply the action. You can select more than one document simultaneously.

**Deleting a Document**

1. Select the document to delete as described above.

2. Click Delete icon.

**Moving a Document from Box to Box**

1. Select the document to move as described above.

2. Click Move icon. The Move Settings page opens. The selected file is shown in Selected Files.

3. Select the box to move the document to in Destination. If the box is password-protected, enter the password.

4. Click Move button. The document is moved to the box.

**Copying a Document from Box to Box**

1. Select the document to copy as described above.

2. Click Copy icon. The Copy Settings page opens. The selected file is shown in Selected Files.

3. Select the box to store the copied document in Destination. If the box is password-protected, enter the password.

4. Click Copy button. The document is copied into the box.

**Joining Documents in One**

1. Select the documents to join as described above.

2. Click Join icon. The Join Settings page opens. The selected file is shown in Selected Files (Join Order).

3. If desired, change the order of the documents to be joined by clicking Top, Up, Down, and Bottom. You can exclude a document from the Selected Files (Join Order) list by clicking Delete.

4. Name the new document which the documents selected are joined in File Name.

5. Click Join button. The documents are joined in the new document.
Download a Document to a PC

1. Select a document you want to download and store into your PC as described above. You can download only one document at a time.

2. Click Download icon. The Download Settings page opens. The selected file is shown in Selected Files.

   If you want to download the selected page in a file, click Settings in Selected Files. After selecting the desired pages, click Submit button.

3. Use the Color Selection drop-down list if you want to change the color of the document after downloading. For example, you can download a color document as a monochrome document when it is stored in a PC.

4. Use the File Format drop-down list to select the type of the document you want to send.

5. Click Download button to begin downloading. Enter the name and destination of the document as you are prompted.

   Note: If downloading is interrupted by the web browser's pop-up blocking, perform the following:

   • For example, on Internet Explorer 11, go to Tools > Internet options > Privacy > Pop-up Blocker, and disable Turn on Pop-up Blocker to turn off pop-up blocking. Or, click Settings on Pop-up Blocker and enter the print system's IP address in Allowed sites.
   • If pop-up blocking is still engaged, on Internet Explorer 11, go to Tools > Internet Options > Security > Custom level > Use Pop-up Blocker and select Disable.
   • If downloading won't complete, try to turn off SmartScreen Filter by browsing to Safety > Turn Off SmartScreen Filter on Internet Explorer 11.

Sending a Document to a Destination

1. Select a document you want to send as described above. You can send only one document at a time.

2. Click Send icon. The Send Settings page opens. The selected file is shown in Selected Files.

3. In Destination, select a destination from Address Book, E-mail, Folder, FAX and i-FAX.

   To select a destination, select Address Book to display the destinations currently registered (depending on E-mail, Folders, FAX, i-FAX, or Groups). Note, however, only Address Book is displayed if the entry of new addresses is prohibited in the device's system menu.

   To delete a destination from Destinations, click Delete icon. If you want to print the selected page in a file, click Settings in Selected Files. After selecting the desired pages, click Submit button.

4. Use the Color Selection drop-down list if you want to change the color of the document to send. For example, you can send a color document as a monochrome document.

5. Name the document in File Name.

6. Enter the date of sending and job ID in Additional Information. These entries are appended in the file name.

7. Use the File Format drop-down list to select the type of the document you want to send.
8. Click Send button. If you are prompted to confirm sending, in case Confirmation Screen is activated on the device’s operation panel, make confirmation. The document is sent to the destination.

**Printing a Document**

1. Select the document(s) to print as described above.

2. Click Print button. The Print Settings page opens. The selected file is shown in Selected Files (Print Order).

3. If desired, change the order of the documents to be joined by clicking Top, Up, Down, and Bottom. You can exclude a document from the Select Pages (Print Order) list by clicking Delete.

   If you want to print the selected page in a file, click Settings in Selected Pages to Process. After selecting the desired pages, click Submit button.

4. Enter the number of copies to print in Copies. When clicking Delete after Print, the document is deleted after printing.

5. Use the Paper Selection drop-down list if you want to change the paper source.

6. Use the Color Selection drop-down list if you want to change the color of the document when it is printed.

7. In Functions, change settings for Duplex, Combine, EcoPrint, and Toner Save Level as desired.

8. Click Print button. The document is printed.

**Deleting a Custom Box**

1. Click Custom Box under Document Box on the navigation menu. The Custom Boxes page opens.

2. Click Delete icon once. This will not delete any custom box yet, but this will let the checkboxes (Select) appear to the left.

3. Select the custom box you want to delete by selecting the checkbox to the left. You can select only one custom box to delete at a time.

4. You can enter the box name in the Box Name window and click the magnifying glass icon to quickly search the custom box.

5. Click Delete icon.

**FAX Box**

The section below explains how to add, edit or delete fax boxes as well as working with their contents.

**Adding a New Fax Box**

1. Click Fax Box under Document Box on the navigation menu.

2. Click Add icon. The New Box - Property page opens.

3. Enter the property such as Number and Box Name.
4. Click **Submit** button.

**Editing a Fax Box**

1. Click **Fax Box** under **Document Box** on the navigation menu.

2. Select the fax box you want to edit by clicking on its **Number** or **Box Name**. The documents contained in the fax box are displayed with its name, date of creation, size, etc. You can choose **List View** or **Thumbnail** to view the box contents.

   Alternatively, you can directly enter the box number in the **Box #** window and click **Go to**, or enter the box name in the **Box Name** window and click the magnifying icon, to quickly search the fax box.

3. Click **Box Property**. The **Property** page will appear.

4. Make entries required to modify the fax box properties such as Number, Name, etc.

5. Click **Submit** button.

**Working with a FAX Box**

1. Click **Fax Box** under **Document Box** on the navigation menu.

2. Select the fax box you want to work with by clicking on its **Number** or **Box Name**. If the box is password-protected, enter the password. The documents contained in the fax box are displayed with its name, date of creation, size, etc. You can choose **List View** or **Thumbnail** to view the box contents. To view details on a document in the fax box, click its **Name**. The **Property** page opens and you can view the number of pages, resolution, etc. You can also change the file name by clicking **Change File Name** or preview by clicking **Preview** on this page.

   To search the document in the fax box, you can open the fax box, enter the document name in the **File Name** window and click the magnifying glass icon.

3. In the fax box, select the check box next to the name of the document that you want to apply the action. You can select more than one document simultaneously.

4. Select either of **Delete**, **Download**, and **Print** to apply to the document. To perform either of these actions, follow the same procedure as described in **Custom box** on page 9.

**Deleting a FAX Box**

1. Click **Fax Box** under **Document Box** on the navigation menu. The **FAX Boxes** page opens.

2. Click **Delete** icon. This will not delete any fax box yet, but this will let the checkboxes (Select) appear to the left.

3. Select the fax box you want to delete by selecting the check box to the left. You can select only one fax box to delete at a time. You can enter the box name in the **Box Name** window and click the magnifying glass icon to quickly search the custom box.

4. Click **Delete** icon once. If required, enter the password and click **OK**.
Sub Address Box

The section below explains how to add, edit or delete sub address boxes as well as working with their contents.

Adding a New Sub Address Box

1. Click Sub Address Box under Document Box on the navigation menu. The Sub Address Boxes page opens.
2. Click Add icon and enter descriptions for the sub address box.
3. Click Submit button.

Editing a Sub Address Box

1. Click Sub Address Box under Document Box on the navigation menu. The Sub Address Boxes page opens.
2. Select the sub address box you want to edit by clicking on its Number or Box Name. The documents contained in the sub address box are displayed with its name, date of creation, etc.

   Alternatively, you can directly enter the box number in the Box # window and click Go to, or enter the box name in the Box Name window and click the magnifying icon, to quickly search the sub address box.
3. Click Box Property. The Property page will appear.
4. Make entries required to modify the sub address box properties such as Number, Name, etc.
5. Click Submit button.

Working with a Sub Address Box

1. Click Sub Address Box under Document Box on the navigation menu. The Sub Address Boxes page opens.
2. Select the sub address box you want to work with by clicking on its Number or Box Name. If the box is password-protected, enter the password. The documents contained in the sub address box are displayed with its name, date of creation, etc.

   To search the document in the sub address box, you can open the sub address box, enter the document name in the File Name window and click the magnifying glass icon.
3. In the sub address box, select the check box next to the name of the document that you want to apply the action. You can select more than one document simultaneously.
4. Select either of Delete or Print to apply to the document. To perform either of these actions, follow the same procedure as described in p.9.

Deleting a Sub Address Box

1. Click Sub Address Box under Document Box on the navigation menu. The Sub Address Boxes page opens.
2. Click Delete icon once. This will not delete any sub address box yet but this will let check boxes (Select) appear to the left.
3. Select the sub address box you want to delete by selecting the check box to the left. You can select only one box to delete at a time. You can enter the box name in the **Box Name** window and click the magnifying glass icon to quickly search the box.

4. Click **Delete** icon once. If required, enter the password and click **OK**.

**Polling Box**

This page allows you to print or delete documents in polling boxes. Also, you can determine whether documents are automatically deleted or retained after polling.

**Polling Box Property**

**Polling Box** Property determines after the document has been sent, whether you want the document to be automatically deleted or to be retained (overwritten).

1. Click **Polling Box** under **Document Box** on the navigation menu. The **Polling Box** page opens.

2. Click **Box Property**. The **Polling Box - Property** opens to select whether the document which was sent is deleted, or overwritten and retained.

3. To configure the box so that documents are overwritten at updating, set **Overwrite Setting** to **Permit**. To configure the box so that documents are automatically deleted after transmission, set **Delete after Transmit** to **On**.

4. After confirming the settings, click **Submit** button.

**Deleting Documents in Polling Box**

To delete documents in a polling box, proceed as follows:

1. Click **Polling Box** under **Document Box** on the navigation menu. The **Polling Box** page opens. You can choose **List View** or **Thumbnail** to view the box contents. To view details on a document in the polling box, click its **Name**. The **Property** page opens and you can view the number of pages, resolution, etc. You can also change the file name by clicking **Change File Name** or preview by clicking **Preview** on this page.

2. Select the document(s) you want to delete by selecting the check box to the left. You can select more than one check box to delete the documents simultaneously.

3. Click **Delete** icon once.

**Printing Documents in Polling Box**

To print documents in a polling box, proceed as follows:

1. Click **Polling Box** under **Document Box** on the navigation menu. The **Polling Box** page opens. You can choose **List View** or **Thumbnail** to view the box contents. To view details on a document in the polling box, click its **Name**. The **Property** page opens and you can view the number of pages, resolution, etc. You can also change the file name by clicking **Change File Name** or preview by clicking **Preview** on this page.

2. Select the document(s) you want to print by checking the checkbox to the left. You can select more than one checkbox to print the documents in succession.

3. Click **Print** button. The **Basic** submenu will open.
4. You can immediately start to print the documents in the order shown in Selected Files by clicking Print. If you want to change the order of printing, highlight a document and press Top, Up, etc. If you want to omit a document from the list, click Delete icon.

5. Click Print button.

Job Box Settings

The section below explains how to change the number of Quick Copy jobs and set automatic delete times for temporary jobs in Job Box. Also, you can determine whether documents are automatically deleted or retained after printing.

1. Click Job Box Settings under Document Box on the navigation menu. The Job Box Settings page opens.

2. Enter the value in Quick Copy Job Retention. You can select Quick Copy jobs from 0 to 300.

3. Enter the value in Repeat Copy Job Retention. You can select Quick Copy jobs from 0 to 50.

4. To delete automatically the temporary retained jobs after printing, select 1 hour, 4 hours, 1 day, or 1 week on the Deletion of Job Retention drop-down list. If you do not want to delete the jobs after printing, select Off on the Deletion of Job Retention drop-down list.

5. After confirming the settings, click Submit button.
5 Address Book

This page is accessible when you have logged in using a general user or administrator account.

Address Book contains Machine Address Book and External Address Book. You can also specify the address quickly by assigning it to the One-Touch key.

Machine Address Book

This section explains you to add, edit or delete contacts in the machine address book.

Contacts

This subsection explains how to add, edit or delete contacts in the machine address book.

In the Addresses page, contacts and groups are listed together. Contacts are identified by the single person icon and groups by the triple person icon. You can filter to display only the contacts or groups by choosing Contact or Group on the Type drop-down list.

Adding a New Contact

1. Click Machine Address under Address Book on the navigation menu. The Addresses page opens.
2. Click Add icon. The New Contact - Property page opens.
3. Enter the contact's Number, Name and E-mail.
   You can also enter SMB and FTP access information for the contact including a shared folder accessible from Microsoft Windows Network. Specify Host Name, Port Number, Path to the shared folder, Login User Name, and Login Password for the contact.
   When the Test button is pressed, this machine tries to connect to the SMB or FTP server.
   If you use the host name, you must first specify the DNS server information.
   If the FAX system is installed or i-FAX is activated in the system, you can include a FAX number and/or i-FAX address.
4. Click Submit button. To cancel, click Back button.

Editing a Contact

The steps below allow you to modify the number or name, e-mail address, SMB and FTP information, FAX and i-FAX settings of a contact.

1. Click Machine Address under Address Book on the navigation menu. The Addresses page opens.
2. Click the contact's Number or Name you want to edit. The Property page appears.
Alternatively, you can directly enter the address number in the Address # window and click Go to, or enter the address name in the Address Name window and click the magnifying icon, to quickly search the contact.

3. Modify Number, Name, or E-mail of the contact. If the system is installed with a FAX system or has i-FAX activated, you can modify these settings.

4. Modify the settings for SMB and FTP accesses as desired. When the Test button is pressed, this machine tries to connect to the SMB or FTP server.

5. Click Submit button. To cancel, click Back button.

Deleting a Contact

1. Click Machine Address under Address Book on the navigation menu. The Addresses page opens.

   Select the contact(s) you want to delete by selecting the checkbox to the left.

2. If you want all contacts displayed on the page deleted, click Check All icon. To deselect all, click None icon.

3. Click Delete icon once.

Adding a New Group

1. Click Machine Address under Address Book on the navigation menu. The Addresses page opens.

   Enter the group’s Number, or leave it to the system to automatically assign a number, and the group’s Name.

3. Add contacts to the group by clicking the Add icon. The Addresses page appears.

   Select the contact to join the group by checking the Select checkbox to the left. You can select more than one document simultaneously. Note that the contacts to join must already have been existent on the Addresses page.

4. Click Submit button. You are returned to the Property page. To delete a contact, select a contact and click the Delete icon.

5. Click Submit button. Repeat the above steps to add more groups.

Edit Group

1. Click Machine Address under Address Book on the navigation menu. The Addresses page opens.

2. Click the group’s Number or Name you want to edit. The Property page of the group opens.

Alternatively, you can directly enter the group number in the Address # window and click Go to, or enter the group name in the Address Name window and click the magnifying icon, to quickly search the group.

3. Modify the group’s Number and Name as desired.

4. Add contacts to the group by clicking the Add icon. The Addresses page appears.
5. Select the contact to join the group by checking the **Select** checkbox to the left. You can select more than one document simultaneously.

You can filter contacts by selecting **E-mail**, **Folder**, **FAX**, or **i-FAX** on the **Type** drop-down list.

6. Click **Submit** button to add the contacts. You are returned to the **Property** page.

To delete a contact, select a contact and click **Delete** icon.

7. Click **Submit** button. You are returned to the **Address** page.

### Delete group

1. Click **Machine Address** under **Address Book** on the navigation menu. The **Addresses** page opens.

2. Select the group(s) you want to delete by selecting the check box to the left.

If you want all groups displayed on the page deleted, click **Check All** icon. To deselect all, click **None** icon.

Note: Deleting a group does not delete the contacts joined in the group.

3. Click **Delete** once.

### External Address Book Settings

This section explains how to use the external address book.

1. Click **External Address Book Settings** under **Address Book** on the navigation menu. The **External Address Book Settings** page opens.

2. Confirm that **LDAP** is set to **On**. If the **LDAP** is **Off**, make settings in **Protocol**.

3. Click **On** of the desired external address book(s), and then click **Settings** button. The **External Address Book 1 (to 4) Settings** page opens.

4. If prompted, configure the following settings.

#### External Address Book Name

Enter the external address book name.

#### LDAP Server

Configure the LDAP server.

1. **LDAP Server Name**: Specifies a name or IP address for the LDAP server.
2. **LDAP Port Number**: Sets the port number used by LDAP. The default port is 389.
3. **Search Timeout**: Specifies the timeout in seconds after which a search on the LDAP server expires.
4. **Login User Name**: Enter the name of the user to access the LDAP server.
5. **Login Password**: Enter the password of the user to access the LDAP server.
6. **Max Search Results**: Enter the maximum value of the search results using Search Settings.

7. **Search Base**: Enter the basic information of search. Entry example of Search Base is as follows.

   To search through the "Users" container in the Active Directory "serv.example.com" domain:

   ```
   cn=Users,dc=serv,dc=example,dc=com
   ```
To search through the "Sales div" Organizational Unit (OU) in the Active Directory "serv.example.com" domain:
ou="Sales div",dc=serv,dc=example,dc=com

To search through the user's container "Hanako Yamada" which belongs to "Sales2" Organizational Unit (OU) in the Active Directory "serv.example.com" domain:

cn="Hanako Yamada",ou=Sales2,dc=serv,dc=example,dc=com

If there are one or more blank spaces in each of value, you have to enclose the value in double quotation marks (".

9. Authentication Type: Select an authentication type from the drop-down list.
10. Connection Test: This will test one transmission for each press, attempting to establish communication with the LDAP server.

Display Sequence

Select a Display Mode from Display from the first name and Display from the family name on the drop-down list.

Search Settings 1 (to 2)

You can configure the following settings.

1. Search Criteria: Enter Display Name and LDAP Attribute as a search criteria.
2. Return Value: Enter LDAP Attribute as a return value and select Job Type from the drop-down list.
3. Optional Return Value: Enter Display Name and LDAP Attribute as an optional return value.

After confirming the settings, click Submit button.

One Touch Key

This section explains how to register the address to the One Touch key.

Registering a new One Touch key

1. Click One Touch Key under Address Book on the navigation menu. One Touch Key List opens.
2. Click Settings of the One Touch Key which you want to register. The One Touch Key Property page opens.
3. Enter the Display Name and Destination in the One Touch Key Property. You can call the address registered in the Address Book by clicking Address Book. You can select the type of addresses using the Type drop-down list in the Addresses page.

Click No. or Name of the address you want to register. The address name and the property information are shown. Select the contact you want to register by checking the radio button to the left. You can check only one contact to assign at a time.

You can enter the address name in the Address Name window and click the magnifying glass icon to quickly search the contact.

4. After confirming the settings, click Submit button.
**Edit one touch key**

1. Click **One Touch Key** under **Address Book** on the navigation menu. **One Touch Key List** opens.

2. Enter the key number in the **Key #** windows and click **Go to**. The **Property** page appears.

3. Make entries required to modify the Display Name and the Destination. Click **Delete** to delete the destination.

4. After confirming the settings, click **Submit** button.

**Delete One Touch Key**

1. Click **One Touch Key** under **Address Book** on the navigation menu. **One Touch Key List** opens.

2. Click **Delete** of the One Touch Key which you want to delete.
6 Device Settings

This page is accessible when you have logged in the embedded server with administrator privilege, while network authentication or local authentication is enabled.

If prompted, configure the following settings. See the sections below for detailed information.

- Paper/Feed/Output
- Original Document
- Energy Saver/Timer
- Date/Time
- System

Paper/Feed/Output

This section includes settings that apply to paper size and media type for the paper loaded in the MP tray and the cassettes, configuring cassette group, paper output, and the other detailed properties.

Cassette Settings

1. Click Paper/Feed/Output under Device Settings on the navigation menu. The Paper/Feed/Output Settings page opens.
2. Configure the paper size and media type for each cassette.
3. After confirming the settings, click Submit button.

MP Tray Settings

1. Click Paper/Feed/Output under Device Settings on the navigation menu. The Paper/Feed/Output Settings page opens.
2. Configure the paper size and media type for MP Tray.
3. After confirming the settings, click Submit button.

Group Settings

1. Click Paper/Feed/Output under Device Settings on the navigation menu. The Paper/Feed/Output Settings page opens.
2. Select the cassette(s) corresponding to your desired group arrangement.
3. After confirming the settings, click Submit button.

Paper Output Settings

1. Click Paper/Feed/Output under Device Settings on the navigation menu. The Paper/Feed/Output Settings page opens.
2. Configure the default output tray. You can change the output tray for Copy/Custom Box, Printer and FAX respectively.

3. After confirming the settings, click Submit button.

Other Settings

1. Click Paper/Feed/Output under Device Settings on the navigation menu. The Paper/Feed/Output Settings page opens.

2. You can configure the following settings.

   Default Paper Source
   You can select the cassette or MP Tray feed the paper with priority.

   Paper Selection
   You can select Auto or Default Paper Source by clicking the drop-down list.

   Auto Paper Selection
   You can select Most Suitable Size or Same as Original Size by clicking the drop-down list.

   Special Paper Action
   You can select Adjust Print Direction or Speed Priority by clicking the drop-down list.

   Media for Auto (Color)
   You can select the media type when Auto is selected in Paper Selection for color printing.

   Media for Auto (B&W)
   You can select the media type when Auto is selected in Paper Selection for black and white printing.

   Paper Source for Cover
   You can select the cassette or MP Tray feed the cover.

   Paper Size for Small Original
   You can select Default Paper Size or the paper size by clicking the drop-down list when an original of a small size, such as a card, which the scanner cannot detect is printed.

   Offset One Page Documents
   You can select whether offset stacking (On) or not (Off) when printing documents comprised of only one page.

   Offset Documents Each Job
   You can select whether offset stacking (On) or not (Off) when printing documents comprised of each job.
Separator Sheet Paper Source

You can select the cassette or MP Tray feed the separator sheet by clicking the drop-down list.

Message Paper Set

You can select whether display (On) or not (Off) the confirmation screen when loading the paper in each paper source.

3. After confirming the settings, click Submit button.

Paper Detail Settings

1. Click Paper/Feed/Output under Device Settings on the navigation menu. The Paper/Feed/Output Settings page opens.

2. Click Settings in Paper Detail Settings. The Paper Details Settings page opens.

You can configure the following settings.

Custom Page Size Settings

You can select whether change the size of Custom Paper (On) or not (Off). When you want to change the settings, enter the length (X) and width (Y) of the Custom Paper.

Media Type Settings

You can select the paper weight for each media type by clicking the drop-down list. When you select the Custom 1 to 4, you can select the paper weight as well as specifying whether or not to use duplex printing and entering the custom paper name.

3. After confirming the settings, click Submit button.

Original Document

This section explains how to configure the original.

Auto Detect Original Size

2. You can configure the following settings.

System of Units

Select Metric or Inch as measurement of original document for auto detect. If you select Inch, select an original size (Legal, OfficioII or 216 x 340 mm) from the drop-down list.

A6/Hagaki

Select A6 or Hagaki (postcard) as a original size for auto detect. When you select Hagaki (postcard), only an original placed on a platen can be detected.
Folio

Select **On** when you want to detect the Folio-size document automatically.

**11 x 15”**

Select **On** when you want to detect the 11 x 15”-size document automatically.

Note: Some model type can detect all the originals automatically, or select the default size of original placed on the platen.

3. You can select A6 or Hagaki for A6/Hagaki and **On** (auto detection) or **Off** for Folio and 11 x 15”, according to the machine type.

4. After confirming the settings, click **Submit** button.

**Custom Original Size**

1. Click **Original Document** under **Device Settings** on the navigation menu. The **Original Document** page opens.

2. Select **On** or **Off** for each Custom Original (1 to 4). When you want to change the settings, enter the length (X) and width (Y) of the Custom Paper.

3. After confirming the settings, click **Submit** button.

**Energy Saver/Timer**

This section explains how to configure the Energy Saver Settings and Timer Settings.

**Energy Saver Settings**

1. Click **Energy Saver/Timer** under **Device Settings** on the navigation menu. The **Energy Saver/Timer Settings** page opens.

2. You can configure the following settings.

**Sleep Level**

Select **Quick Recovery** or **Energy Saver**. Even if you selected either sleep level, the machine can recover from the sleep mode when you press any key on the operation panel or the machine received the print or fax job.

**Quick Recovery** recovers from the sleep mode faster than Energy Saver.

**Energy Saver** reduces power consumption even more than **Quick Recovery**, and allows sleep mode to be set separately for each function. The time required for the machine to wake up from the sleep mode and resume normal operation will be longer than for **Quick Recovery**.

Alternatively, on some models, the **Sleeping** page appears on the embedded web server while the system is engaged in Energy Saver. You can click **Start** on the **Sleeping** page.

**Sleep Rule**

If you have selected Energy Saver mode of sleeping, click **On** of the appropriate radio button for the interface or device you would like to engage in Energy Saver. Click **Off** if you do not want to engage Energy Saver for the interface or device. For
example, if you want the print data received by the network interface always to wake
the machine to continue printing, click Off next to Network.

Auto Sleep

Click Settings button to open the Auto Sleep Settings page. Click On if you want
to use Auto Sleep and click Submit button.

Sleep Timer

Specify the time period in the drop-down list, from 1 to 240 minutes, after that time
period the system enters Auto Sleep Mode.

Power Off Timer

Specifies the time from 1 hour to 1 week after which the system enters the power off
mode, where the device automatically turns off after a certain amount of time
elapses the device was last used.

Power Off Rule

Click On of the appropriate radio button for the interface or device you would like to
engage in power off mode. Click Off if you do not want to engage power off mode
for the interface or device.

Low power Timer

Specifies the time from 1 to 240 minutes after which the system enters the low
power mode, where it reduces the power consumption.

Energy Saver Recovery Level

Select Full Recovery, Normal Recovery, or Power Saving Recovery.

3. After confirming the settings, click Submit button.

Set Timer

1. Click Energy Saver/Timer under Device Settings on the navigation menu. The Energy
Saver/Timer Settings page opens.

2. This page allows the following settings:

Auto Panel Reset

Configures the panel to be automatically reset. Activate this setting to open Panel
Reset Timer and specify the time between 5 and 495 seconds after that the panel
will be automatically reset.

Interrupt Clear Time

This determines the time period before the machine reverts to normal mode, after
the interrupt copy mode has been engaged. The range is 5 to 495 seconds.

WSD scan timer

This determines the time period before the machine reverts to normal mode, after
WSD scan mode has been engaged. The range is 10 to 495 seconds (in 5-second
increments).
Weekly timer

This page allows the following settings: Activate or deactivate this setting. To make advanced settings, click Settings. The Weekly Timer Settings page appears. In Schedule, set to turn power on or off for each day of the week. Enter time for activation. To set the time of retries, specify the limit of retries in Retry Times and enter a value in Retry Times and Retry Interval.

Auto File Deletion Time(Custom Box)

Set the time to automatically delete stored documents in the custom box.

3. After confirming the settings, click Submit button.

Date/Time

This section includes advanced settings on date and time.

Date/Timer Settings

1. Click Date/Time under Device Settings on the navigation menu. The Date/Time Settings page opens.

   The following items are displayed:

   **Current Local Time**
   
   Displays the time that is currently set in the machine.

   **Current Universal Time (UTC/GMT)**
   
   Displays the Greenwich Mean Time that is currently set in the machine.

2. Make changes in the settings if needed.

   Select Date, Year, Month, Day, Time, Date Format, or Time Zone, which you want to make a change.

3. After confirming the settings, click Submit button.

Synchronize

1. Click Date/Time under Device Settings on the navigation menu. The Date/Time Settings page opens.

2. Make changes in the settings if needed.

   If a time server is used to synchronize the time as well, the current time can be adjusted regularly and easily. Enter the host name or IP address of the time server and click the Synchronize button.

   If you use the host name, you must first specify the DNS server information.

   Time information is required when you receive reports from this machine via E-mail. It is recommended that you set the time when the report mail function is enabled.

3. Click Submit button.
Device Settings

System

This section includes advanced settings that apply to the system.

If the settings for the item marked with an asterisk (*) has been changed, you must restart the machine or the network. To restart the machine, proceed to the Reset page.

Device Information

1. Click System under Device Settings on the navigation menu. The System Settings page opens.

2. Make changes in the settings if needed.

   Enter Host Name, Asset Number, and Location, accordingly.

   If you use the host name, you must first specify the DNS server information.

3. Click Submit button.

General

1. Click System under Device Settings on the navigation menu. The System Settings page opens.

2. Make changes in the settings if needed.

Language

Select the language.

Software Keyboard Layout

Select an appropriate type of keyboard.

USB keyboard type

Select an appropriate type of USB keyboard.

Override A4/Letter

Specifies whether or not the A4 and Letter size paper should be interchangeable. When turned On, for example, if the A4 paper is not in the tray, the Letter size paper will be selected for printing. When turned Off, the Letter size paper will not be used in place of the A4 paper, when A4 is selected for printing but the A4 tray is empty.

Measurement

Select the unit of measurement for entry.

Preset Limit

Specify the number of copies limited to print.

Default Screen

Select the screen to set as the default screen.

Default screen for Send/FAX

Select the screen to set as the default screen.
Device Settings

**Default Address Book**
Select the type of default addressbook to set.

**Orientation Confirmation**
Activate or deactivate the prompt that confirms the orientation of original documents.

**Altitude Adjustment**
Select an altitude from the drop-down list according to your operating environment.

**Bluetooth**
Specifies whether to use the bluetooth keyboard.

**Numeric Keyboard Settings**
You can configure the following settings.
1. **Default Display (Copy/Box Print)**: Specifies whether to display the numeric keyboard on Copy/Box print screen.
2. **Default Display (HyPAS Application)**: Specifies whether to display the numeric keyboard when using the HyPAS application.
3. **Layout (HyPAS Application)**: Select the keyboard layout when activating the HyPAS application.

**NFC**
Specifies whether to perform the wireless communication using NFC.

3. Click Submit button.

**Error Settings**
1. Click **System** under **Device Settings** on the navigation menu. The **System Settings** page opens.
2. Make changes in the settings if needed.

**Action when color toner is empty**
Select the action when color toner is empty, whether you want to cancel printing or print forcibly in black and white mode.

**MP tray empty**
Activate or deactivate the attention display when the MP tray has become empty.

**Error Clear Timer**
Activate or deactivate automatic error clearing at an error. If activated, printing will automatically resume after the time period that you can specify from 5 to 495 seconds.

**Skip Error Job**
Activate or deactivate automatic job skipping at an error. If activated, printing will automatically resume by skipping the job in error after the time period that you can specify from 5 to 90 seconds.
Low Toner Alert Level

Activate or deactivate the attention display when toner is running low. If activated, the attention display will appear in a relative amount of remaining toner that you can specify from 5 to 100.

Toner Waste Full Alert

Activate or deactivate the attention display when waste toner box is becoming full. If activated, the attention display will appear in Toner Waste Full Alert Setting that you can specify from 10 to 90.

Default Paper Source

Displays this item when a large capacity feeder is installed and selected as a default paper source from Default Paper Source of Other Settings in Paper/Feed/Output page.

3. Click Submit button.
7 Function Settings

This page is accessible when you have logged in the embedded server with administrator privilege, while network authentication or local authentication is enabled. If needed, make the following settings: See below for detailed information.

- Common/Job Default
- Copy
- Printer
- E-mail
- Sending Job - Folder
- DSM Scan
- FAX/i-FAX
- Send and Forward
- RX/Forward Requirements
- Operation Panel

Common/Job Default

In this section, you can make settings for the following items:

Common Settings

1. Click Common/Job Defaults under Function Settings on the navigation menu. The Common/Job Default Settings page opens.

2. Make changes in the settings if needed.

   Priority Setting
   - Activate or deactivate automatic zooming with priority.

   OCR Text Recognition Action
   - You can select this item when the optional Scan Extension kit (A) is activated.

   High comp. PDF image
   - You can prioritize to ensure smaller file sizes or better quality text representation in high-compression PDF format.

3. Click Submit button.

Job Default Settings

1. Click Common/Job Defaults under Function Settings on the navigation menu. The Common/Job Default Settings page opens.

2. You can make changes for the following items as required.

   Document name
   - Name the default document used in the print job.
Additional Info.

Select the date, job number, etc.

3. Click Submit button.

Scan Default Settings

1. Click Common/Job Defaults under Function Settings on the navigation menu. The Common/Job Default Settings page opens.

2. You can make changes for the following items as required.

   Original Orientation (Copy)

   You can select Auto, Top Edge on Top or Top Edge on Left as the original orientation.
   Note: Auto can be configured when an optional OCR Expansion kit is installed.

   Original Orientation (Send/Store)

   You can select Auto, Top Edge on Top or Top Edge on Left as the original orientation.
   Note: Auto can be configured when an optional OCR Expansion kit is installed.

   Color Selection (Send/Store)

   This selects color mode for scanning or storing. Auto Color (Color/Grayscale) and Auto Color (Color/Black & White) allow you identify color for the original document to scan. You can manually select Black & White to forcedly switch color mode.

   Scan Resolution

   Specifies the resolution for scanning. The resolutions available differ depending on the model, current color mode, and the saving format of files. To scan in full color or grayscale with a solution of 400 dpi or greater, the internal memory must be expanded for some models.

   Original Image (Copy)

   The original quality for scanning or storing must be selected according to the type of the original. Select from Text+Photo (Printer), Text+Photo (Magazine), Photo (Printer), Photo (Magazine), Photo (Photo Paper), Text, Text (Fine Line), Graphic/Map (Printer), and Graphic/Map (Magazine).
   Note: You can select Color table from the drop-down list when it is downloaded.

   Original image (Send/Store)

   The original quality for scanning or storing must be selected according to the type of the original. Switch the original quality from Text+Photo, Photo, Text, Text (for OCR), and Text (Fine Line).

   Zoom %

   This switches the zoom ratio between Auto and 100%. The default setting is 100%.

   Background Density (Copy)

   This removes dark background from originals, such as newspapers, when copying.
Background Density (Send/Store)
This removes dark background from originals, such as newspapers, when sending or storing a job.

Continuous Scan (Copy)
Activates or deactivates Continuous Scan for copy.

Continuous Scan (Send/Store)
Activates or deactivates Continuous Scan for send or store.
Note: Some machine products display Continuous Scan (Except FAX). Activates or deactivates Continuous Scan except fax.

Continuous Scan (Fax)
Activates or deactivates Continuous Scan for fax.

Border Erase
Set the width of the outer and inner borders to erase in 0 to 50mm. You can set border erase for the reverse side.

Prevent Bleed-through (Copy)
Activate or deactivate Prevent Bleed-through for copying.

Prevent Bleed-through (Send/Store)
Activate or deactivate Prevent Bleed-through for sending and storing.

Skip Blank Page (Copy)
Activate or deactivate Skip Blank Page for copying.

Skip Blank Page (Send/Store)
Activate or deactivate Skip Blank Page for sending and storing.

Prevent Light Reflection
Activate or deactivate Prevent Light Reflection when using the Erase Shadowed Areas feature.

3. Click Submit button.

Default Output Settings
1. Click Common/Job Defaults under Function Settings on the navigation menu. The Common/Job Default Settings page opens.

2. You can make changes for the following items as required.

EcoPrint
Switches EcoPrint On or Off to control toner consumption for saving the printing costs. The default setting is Off. When selecting On, you can select Toner Save Level from 1 (Low) to 5 (High).
Function Settings

Margin
You increase or decrease the top and left gutters from -18 to +18mm.

JPEG/TIFF Print
This determines the physical size of JPEG images when printing them from a USB flash device. Choices include Fit to Paper Size, Image Resolution, and Fit to Print Resolution.

XPS Fit to Page
This determines the page size for printing XPS data. Turn On to fit print data over the page size and turn Off to print in the original size.

Collate/Offset
Select the default collate/offset settings. When Collate is set to On, the documents are collated by copy (Offset is set to Each Set). When Collate is set to Off, the documents are collated by page (Offset is set to Off).

FAX TX Resolution
This selects the resolution to fax a document.

E-mail Template
This allows to create a template for entering a subject and body information of E-mail. Up to three templates can be created and configured with the default settings.

i-FAX Template
This allows to create a template for entering a subject and body information for i-FAX.

3. Click Submit button.

Color Default Settings
1. Click Common/Job Defaults under Function Settings on the navigation menu. The Common/Job Default Settings page opens.
2. You can make changes for the following items as required.

Color Selection (Copy)
This selects color mode for copying. Auto Color automatically identifies a full color or black and white original. You can manually select either Full Color or Black & White to forcedly switch color mode.

Auto Image Rotation
Activate or deactivate automatic image rotation mode.

DP Read Action
You can prioritize to use the document processor either in faster scanning or better quality scanning.
Repeat Copy

Enables additional copies in the desired quantity as necessary after a copy job is completed.

Note: Repeat Copy is not displayed when an optional Data Security Kit is activated or a Repeat Copy job is cleared.

Skip Blank Page

You can choose whether blank pages should be delivered or not.

3. Click Submit button.

File Default Settings

1. Click Common/Job Defaults under Function Settings on the navigation menu. The Common/Job Default Settings page opens.

2. You can make changes for the following items as required.

File Format

The file format is available from PDF, TIFF, JPEG, XPS, and High Compression PDF.

Image Quality

This determines the quality of the image when saved, from 1 Low Quality (High Comp.) to 5 High Quality (Low Comp.).

PDF/A

Turns PDF/A-compliant format PDF/A-1a, PDF/A-1b, PDF/A-2a, PDF/A-2b, PDF/A-2u or Off, when File Format above is PDF. PDF/A is an electronic file format for long-term preservation of documents as addressed in the ISO 19005-1 specification.

OCR Text Recognition

You can convert the scanned document to the text data when you selected PDF or High Compression PDF as the file format.

Primary OCR Language

You can choose the primary OCR language from the drop-down list.

Auto Image Rotation (OCR)

Rotates the image direction to read when setting to On.

Note: OCR Text Recognition, Primary OCR Language, and Auto Image Rotation (OCR) can be configured when an optional OCR Expansion kit is installed.

Color TIFF Compression

This allows to select TIFF V6 or TTN2 format for compression of color TIFF images.

File Separation

This extract pages as separate files from an output file. You can specify the number of file separation from 1 to 500 when setting to On.
Function Settings

3. Click **Submit** button.

**Copy**

This section includes advanced settings for copying.

1. Click **Copy** under **Function Settings** on the navigation menu. The **Copy Settings** page opens.

2. You can make changes for the following items as required.

   **Reserve Next Priority**
   
   Activate or deactivate to prioritize the next job reserved.

   **Auto Image Rotation Action**
   
   Select the behavior of automatic image rotation in three ways.

   **Color Table (Copy)**
   
   You can specify the color table name.
   
   Note: Color table (Copy) is displayed only when it is downloaded.

3. Click **Submit** button.

**Function Default**

The default settings can be changed in **Common/Job Defaults Settings** page.

**Printer**

This section includes advanced settings for printing.

If the settings for the item marked with an asterisk (*) has been changed, you must restart the machine or the network. To restart the machine, proceed to the **Reset** page.

**General**

1. Click **Printer** under **Function Settings** on the navigation menu. The **Printer Settings** page opens.

2. You can make changes for the following items as required.

   **Emulation**
   
   Set the Emulation Mode.

   **Alternate Emulation**
   
   When you have selected **KPDL(Auto)** as emulation mode, you can switch between KPDL and another emulation mode (alternative emulation) automatically according to the data to print. This item can be displayed when an optional Emulation kit is installed.

   **Paper Feed Mode**
   
   Determines the behavior of paper feed selection when the paper you requested of size and/or type is not available in the current paper source. **Auto** lets the machine
to search for the matching paper including all the paper sources. **Fixed** does not perform searching in the other paper sources.

**Form Feed Timeout**

Adjusts the form feed timeout between 5 and 495 seconds in 5-second increments. A form feed will occur in the absence of data during this time period. The default setting is 30 seconds.

**Job Name**

Select the job number, job name, etc.

**User Name**

Activate or deactivate to use User Name.

**Message Banner Print**

Each time a banner page is printed, the machine halts and displays a message that prompts you to continue banner printing. You can activate (**On**) or deactivate (**Off**) this message.

**Wide A4**

Activate (**On**) or deactivate (**Off**) Wide A4 size for printing.

**Auto Cassette Change**

You can select the actions when the paper runs out in the paper source while printing.
- When selecting **Off**, the machine displays message to load paper in paper cassette and stops printing. Load the paper according to the paper source displayed to resume printing. You can also select the desired paper source.
- When selecting **On**, the machine continues printing automatically if the other paper cassette contains the same paper as the currently-used paper cassette.

**Remote Printing**

Permit or prohibit remote printing.

**AirPrint Settings**

1. Click **Printer** under **Function Settings** on the navigation menu. The **Printer Settings** page opens.
2. Click **Settings** button. The **AirPrint** Settings page opens.

   You can make changes for the following items as required.

   **AirPrint**

   The default setting is **On**.

   **Bonjour Name**

   Enter the Bonjour name.
**Location**

Enter the location of the machine on **Location** of the **System Settings** page under **Device Settings**.

Note: When you enter **Location**, the location appears under the printing device name appears on the printer selection screen using the mobile device. The location also appears on the title (upper right) of Command Center RX.

**Geolocation**

Specifies whether or not to set the geolocation information of the machine. If this setting turns **On**, **Latitude**, **Longitude** and **Altitude** appear on the **AirPrint** page.

Note: Even if **Geolocation** is set to **Off**, AirPrint works properly.

**Latitude**

Enter the latitude of the machine from -90.000000 to 90.000000 degrees.

**Longitude**

Enter the longitude of the machine from -180.000000 to 180.000000 degrees.

**Altitude**

Enter the altitude of the machine from 0 to 10000 meters.

**Google Cloud Print Settings**

1. Click **Printer** under **Function Settings** on the navigation menu. The **Printer Settings** page opens.

2. Click **Settings** button on **Google Cloud Print Settings**. The **Google Cloud Print Settings** page opens.

3. You can configure settings for **General**. Make the following setting:
   1. **Printer Name**: Displays the device name. You can modify the name as necessary.
   2. **Proxy**: Click **Settings** button. The **TCP/IP Settings** page opens.
      - If you do not use a proxy server, set **Proxy** to **Off**.
      - If you configure the proxy, set **Proxy** to **On**, and specify the following items as necessary. For details, see **Proxy settings** on page 58.
      - After configuring settings, return to the **Google Cloud Print Settings** page.
   3. **Proxy Authentication**: Enter **User Name** and **Password** for proxy authentication.

4. You can configure settings for **Google Cloud Print**. Make the following settings:
   1. Click **Register** button.
   2. Click the URL to sign in to Google and claim printer for Google Cloud Print.
   3. Enter the account (Gmail address and password) to sign in.
   4. Click **OK** button. The device used for Google Cloud Print is registered.

5. You can make changes for the following items on **Privet (Cloud Device Local Discovery Protocol and API)** as required.
   1. **Local Discovery**: When selecting **On**, the browser discovers the devices on the local network.
   2. **Available Network**: Select the available network for Google Cloud Print.
   3. **Local Print**: When selecting **On**, you can print from the device on the local network, without cloud server.

6. Click **Submit** button.
Page Control Settings

1. Click Printer under Function Settings on the navigation menu. The Printer Settings page opens.

2. You can make changes for the following items as required.

   Duplex
   
   Select 1-sided, 2-sided Bind Long Edge, or 2-sided Bind Short Edge as duplex mode.

   Copies
   
   Select the number of copies to print.

   Page Orientation
   
   Switches Portrait or Landscape page orientation.

   LF Action
   
   Configures LF and CR actions.

   CR Action
   
   Configures LF and CR actions.

3. Click Submit button.

Print Quality Settings

1. Click Printer under Function Settings on the navigation menu. The Printer Settings page opens.

2. You can make changes for the following items as required.

   Gloss Mode
   
   Sets Gloss Mode to On or Off. The default setting is Off. This is only available for some color machines which support Gloss Mode.

   Color Selection
   
   Sets Color Mode to Color or Black & White. This is only available for some color machines.

   KIR
   
   Switches KIR smoothing On or Off.

   EcoPrint
   
   Switches EcoPrint On or Off to control toner consumption for saving the printing costs. The default setting is Off. When selecting On, you can select Toner Save Level from 1 (Low) to 5 (High).

   Resolution
   
   Select 600dpi or 1200dpi as the resolution.

3. Click Submit button.
E-mail

This section includes advanced settings for E-mail.

**SMTP protocol**

1. Click **E-mail** under **Function Settings** on the navigation menu. The **E-mail Settings** page opens.

2. You can make changes for the following items as required.

   **SMTP Protocol**
   
   Display whether a SMTP connection is available or not. Configure SMTP in **SMTP (E-mail TX)** on the **Protocols Settings** page.

   **SMTP Server Name**
   
   Enter the SMTP server name or its IP address. If entering the name, rather than the IP address, a DNS server address must also be configured. The DNS server address may be entered on the **TCP/IP Settings** page.

   **SMTP Port Number**
   
   Enter the port number that SMTP will use (default is 25). Normally, use port 25, but you can change the port number to suit the email server’s application and operation. For example, the default port number for SMTP connections over SSL is 465. The default port number for SMTP authentication is 587.

   **SMTP Server Timeout**
   
   Sets the timeout in seconds during which this device tries to connect to the SMTP server.

   **Authentication Protocol**
   
   Enables or disables the SMTP authentication protocol or sets **POP before SMTP** as the authentication type. When selecting **On** or **POP before SMTP**, you can select user on the drop-down list. When selecting **Other** from **Authentication as**, you can specify **Login User Name** and **Login Password**.

   **SMTP Security**
   
   Displays SMTP Security. This item appears when SSL/TLS or STARTTLS is selected on **SMTP Security** of the **Protocol Settings** page.

   **POP before SMTP Timeout**
   
   Sets the timeout in seconds during which this device tries to connect to the POP3 server. You can configure this item when you selected **POP before SMTP** as **Authentication Protocol**.

   **Connection Test**
   
   Tests to confirm that the settings on this page are correct. When **Test** button is clicked, this machine tries to connect to the SMTP server.
Domain Restriction

Activate or deactivate to restrict domains. Click Domain List button to configure. Enter a domain name that is permitted or rejected. You can also specify the E-mail addresses.

3. Click Submit button.

POP3

1. Click E-mail under Function Settings on the navigation menu. The E-mail Settings page opens.

2. You can make changes for the following items as required.

   POP3 Protocol

   Display whether a POP3 connection is available or not. Set to On on POP3 (E-mail RX) of the Protocol Settings page. If Remote Printing is prohibited, E-mail printing is unavailable. Configure Remote Printing in Printer Settings page.

   Check Interval

   Displays the interval, in minutes, for connecting to the POP3 server to check for incoming e-mails at specific interval. Specify the interval of performing checks in the range from 3 minutes to 60 minutes. The default is 15 minutes.

Run once now

Click Receive button to immediately receive E-mail from the POP3 server. When Remote Printing is set to Permit, the machine prints the received E-mail.

Domain Restriction

Activate or deactivate to restrict domains. Click Domain List button to configure. Enter a domain name that is permitted or rejected. You can also specify the E-mail addresses.

POP3 User Settings

Click Settings button and configure the following user settings. Up to three users can be set.

1. User Profile 1 (to 3): Enables or disables the user.
2. E-mail Address: Enter the E-mail address.
3. POP3 Server Name: Enter the POP3 server host name or IP address. If you use the host name, you must first specify the DNS server information.
4. POP3 Port Number: Enter the port number that POP3 will use (default is 110). Normally, use port 110, but you can change the port number to suit the email server’s application and operation. For example, the default port number for POP3 over SSL is 995.
5. POP3 Server Timeout: Enter the timeout in seconds during which this machine tries to connect to the POP3 server.
6. Login User Name: Enter the login name of the user for the POP3 account.
7. Login Password: Enter the password to log in the POP3 account.
8. Use APOP: Enables or disables APOP. APOP is an encryption mechanism used for encrypting the Login Password during communication with the POP3 server. When Use APOP is Off, the Login Password is sent using plain ASCII text. When Use APOP is On, the Login Password is encrypted, therefore cannot be read. APOP requires that the POP3 server supports APOP, and has APOP enabled.
9. **POP3 Security**: Enables or disables POP3 Security. When this protocol is enabled, either **SSL/TLS** or **STARTTLS** must be selected. To enable POP3 security, the POP3 port may have to be changed according to the server settings.

10. **Connection Test**: This will test one transmission for each press, attempting to establish communication with the POP3 server.

11. **Delete e-mail after retrieval**: Enables or disables the Delete E-mail after retrieval function. When this item is set to **On**, the retrieved E-mail is deleted from the POP3 server. When this item is set to **Off**, the E-mail will not be deleted after retrieved from the POP3 server.

12. **E-mail Size Limit**: Enter maximum E-mail size in kilobytes. When the value is 0, the limitation for E-mail size is disabled.

13. **Cover Page**: Specifies whether to print the body of an E-mail in addition to the attached files. When this item is set to **On**, the attached files and the body of an E-mail are printed. When no attached files exist, only the body of an E-mail is printed. When this item is set to **Off**, only the attached files are printed. When no attached files exist, nothing is printed.

3. Click **Submit** button.

**E-mail Send Settings**

1. Click **E-mail** under **Function Settings** on the navigation menu. The **E-mail Settings** page opens.

2. You can make changes for the following items as required.

   **E-mail Size Limit**

   Enter the maximum size of E-mail that can be sent in kilobytes. When the value is 0, the limitation for E-mail size is disabled.

   **Sender Address**

   Displays the sender address used for E-mails sent from this machine.

   **Signature**

   Displays the signature to be inserted in the end of the E-mail body.

   **Function Default**

   The default settings can be changed in **Common/Job Default Settings** page.

3. Click **Submit** button.

**Scan to Folder**

This section includes advanced settings for copying.

**FTP Settings**

1. Click **Scan to Folder** under **Function Settings** on the navigation menu. The **Scan to Folder Settings** page opens.

2. This allows you to verify the current settings which follow.
**Function Settings**

**FTP**

Display whether a FTP connection is available or not. Set **FTP Client (Transmission)** to **On** on the **Protocol Settings** page.

**FTP Port Number**

Display the FTP port number. Enter **Port Number** on the **Protocol Settings** page.

**SMB Settings**

1. Click **Scan to Folder** under **Function Settings** on the navigation menu. The **Scan to Folder Settings** page opens.
2. This allows you to verify the current settings which follow.

**SMB**

Display whether an SMB connection is available or not. Set **SMB** to **On** on the **Protocol Settings** page.

**SMB Port Number**

Display the SMB port number. Enter **Port Number** on the **Protocol Settings** page.

**Function Defaults**

1. Click **Scan to Folder** under **Function Settings** on the navigation menu. The **Scan to Folder Settings** page opens.
2. The default settings can be changed in **Common/Job Default Settings** page.

**DSM Scan**

DSM (Distributed Scan Management) is a Microsoft definition of scanner management systems over the Windows networks. The administrator can use the Windows Server 2008 R2 scan management to obtain ScanProcess for each user and add them to Active Directory. This will allow the user to execute scanning according to the scan process.

**General**

1. Click **DSM Scan** under **Function Settings** on the navigation menu. The **DSM Scan Settings** page opens.
2. You can make changes for the following items as required.

**DSM Scan**

Display whether a DSM connection is available or not. Set **DSM Scan** to **On** on the **Protocol Settings** page.

**Location**

Display the DSM location. Enter the location on **System Settings** page.

**DSM Scan Client Certificate**

Displays whether the certificate is active. To make advanced settings, click **Settings** button and select a certificate. Make settings for the device certificate in **Certificates** page of **Security Settings**.
Function Settings

3. Click Submit button.

LDAP Settings

1. Click DSM Scan under Function Settings on the navigation menu. The DSM Scan Settings page opens.

2. You can make changes for the following items as required.

   LDAP Server Name
   Specifies a name or IP address for the LDAP server. This is required only if Active Directory which contains Scan Process is unidentical with the server for the network authentication.

   LDAP Port Number
   Sets the port number used by LDAP. The default port is 389.

   Search Timeout
   Specifies the timeout time after which a search on the LDAP server expires.

   LDAP Security (DSM Scan)
   Display whether a LDAP security is available or not. Select the LDAP security from LDAP Security (DSM Scan) drop-down list on the Protocol Settings page.

   Authentication Type
   Selects either the Simple or SASL for the authentication type.

3. Click Submit button.

Certificate Status

1. Click DSM Scan under Function Settings on the navigation menu. The DSM Scan Settings page opens.

2. The status of the Root Certificates (1 to 5) and DSM Client Certificate is shown. Make settings for the Root Certificate in Certificates page.

FAX/i-FAX

This section includes advanced settings for FAX/i-FAX.

If the settings for the item marked with an asterisk (*) has been changed, you must restart the machine or the network. To restart the machine, proceed to the Reset page.

Common Settings

1. Click FAX/i-FAX under Function Settings on the navigation menu. The FAX/i-FAX Settings page opens.

2. You can configure settings for Transmission. Make the following settings:

   1. Local FAX Name: Specifies your FAX system name.
   2. TTI: Selects On or Off whether to send the TTI (Transmit Terminal Identifier) information to the other party.
3. **TTI Position**: Selects the position of the TTI to be printed on the transmitted documents.

4. **Account as Local FAX Name**: Set to On to use the account name as the local FAX name. The account name appears in place of the local FAX name.

5. **Retry Times**: Specify the Retry Times from 0 to 14 times.

3. You can configure settings for **Reception**. Make the following settings:

   1. **Media Type**: Sets the media type to print the received documents.
   2. **Use MP Tray**: Selects whether or not to include the MP (multi-purpose) tray for auto media selection when printing received documents. When turned On, the MP tray will be included as an option for auto media selection, and when turned Off, only the cassettes will be selected.
   3. **Reduced RX Size**: Specifies the printing configuration for printing a document, which is larger than the selected paper size. When **Same Size Override** is selected, the document will be printed on multiple sheets of paper without reducing the text. When **Reduction Override** is selected, the document will be printed on one sheet whenever possible.
   4. **Receive Data/Time**: Selects On or Off whether to print the reception information such as the received date, the received time, the transmitting party's information and the number of transmitted pages on the top of the received documents.
   5. **Duplex Printing**: Specifies whether or not to use the Duplex mode.
   6. **2 in 1 Printing**: Enables or disables 2 in 1 reception.
   7. **Batch Print**: Selects whether or not perform batch print of the received documents.

4. Click **Submit** button.

**Fax Settings**

1. Click **FAX/i-FAX** under **Function Settings** on the navigation menu. The **FAX/i-FAX Settings** page opens.

2. You can configure settings for **General**. Make the following settings:

   1. **Local FAX Number**: Specifies your FAX system number.
   2. **Local FAX ID**: Specifies your FAX ID.
   3. **Speaker Volume**: Sets the volume of the internal speaker that allows you to listen to the other party or to verify the conditions on the telephone line when the **On-Hook** key was pressed. Select the speaker volume from 0 (Mute) to 5 (Maximum).
   4. **Monitor Volume**: Sets the volume of the internal speaker that allows you to verify the FAX tones during FAX communication. Select the speaker volume from 0 (Mute) to 5 (Maximum).

3. You can configure settings for **Transmission**. Make the following settings:

   1. **Dialing Mode**: According to the type of telephone line you are contracted with, select **Tone (DTMF)**, **Pulse (10PPS)**, or **Pulse (20PPS)**.
   2. **TX Start Speed**: Selects the speed rate at starting transmission from 33600bps, 14400bps, and 9600bps. Once communication is established, the speed rate that is slower than the other is employed.
   3. **ECM TX**: Turns error correction mode on which corrects errors that may happen during communication. To let the ECM feature to take effect, error correction mode must be enabled on both parties in prior.

4. You can configure settings for **Reception**. Make the following settings:
1. **FAX Receive**: Selects the FAX reception mode. The choices are **Auto** (Normal, FAX/Tel, TAD or DRD) or **Manual**. (The selectable option is different depending on the destination.)

2. **Number of Rings (Normal)**: Specifies the number of rings when **FAX Receive** is **Auto (Normal)**. The range is 1 to 15.

3. **Number of Rings (FAX/Tel)**: Specifies the number of rings when **FAX Receive** is **Auto (FAX/Tel)**. The range is 0 to 15.

4. **Number of Rings (TAD)**: Specifies the number of rings when **FAX Receive** is **Auto (TAD)**. The range is 1 to 15.

5. **Remote Switching Dial Number**: Specifies the FAX remote switching dial number. The range is 00 to 99. Remote switching allows you to initiate FAX reception from a telephone connected to the FAX system.

6. **Encryption Key No.**: Sets the encryption key number used for encrypted communication.

7. **RX Start Speed**: Selects the speed rate at starting reception from 33600 bps, 14400 bps, and 9600 bps. Once communication is established, the speed rate that is slower than the other is employed.

8. **ECM RX**: Turns error correction mode on which corrects error that may happen during communication. To let the ECM feature to take effect, error correction mode must be enabled on both parties in prior.

5. You can configure settings for **Encryption Key**. Make the following settings:

   1. **Encryption Key Registration**: Click **Settings** button. The Encryption Key Registration page opens. Specifies the encryption key in hexadecimal. The length of the encryption key is 16 digits. Enter the encryption key including the numbers 0-9 and the letters A-F.
   2. Click **Submit** button.

6. You can configure settings for **Remote Settings**. Make the following settings:

   1. **FAX Remote Diagnostics**: Activate or deactivate the remote FAX diagnosis.
   2. **Remote Diagnostics ID**: Enter the ID (four digits) specified from the customer center when you activate the **FAX Remote Diagnostics**.

7. You can configure settings for **TX/RX Restriction**. Make the following settings:

   1. **Transmit Restriction**: Selects the transmitting restriction from **Off** and **Permit List + Address Book**.
   2. **Receive Restriction**: Selects the reception restriction from **Off, Permit List + Address Book**, and **Reject List**.
   3. **Unknown Number Reception**: Selects **Reject** or **Permit** when you select **Reject List** from **Receive Restriction**.
   4. **Permit No. List**: Permit No. List page allows to add the permitted fax numbers and delete the fax numbers specified. Clicking **List** will display Permit No. List page. Enter the FAX number to add, then click **Submit** button. To delete a fax number from Permit No. List, delete the number from Permit No. List page, then click **Submit** button.
   5. **Permit ID List**: Permit ID List page allows to add the permitted fax IDs and delete the fax IDs specified. Clicking **List** will display Permit ID List page. Enter the FAX ID to add, then click **Submit** button. To delete a fax ID from Permit ID List, delete the fax ID from Permit ID List page, then click **Submit** button.
   6. **Reject No. List**: Reject No. List page allows to add the prohibited fax numbers and delete the prohibited fax numbers specified. Clicking **List** will display the Reject No. List page. Enter the FAX number to add, then click **Submit** button. To delete a fax number from Reject No. List, delete the number from Reject No. List page, then click **Submit** button.
   7. **Function Default**: The default settings can be changed in **Common/Job Default Settings** page.
8. Click Submit button.

i-FAX Settings

1. Click FAX/i-FAX under Function Settings on the navigation menu. The FAX/i-FAX Settings page opens.

2. You can configure settings for TX/RX. Make the following settings:
   1. i-FAX Protocol: Display whether an i-FAX connection is available or not. Set i-FAX (SMTP & POP3) to On on the Protocol Settings page.

3. Configures SMTP. Make the following settings:
   1. SMTP Server Name: Enter the SMTP server name or its IP address. If entering the name, rather than the IP address, a DNS server address must also be configured. The DNS server address may be entered on the TCP/IP Settings page.
   2. SMTP Port Number: Enter the port number that SMTP will use (default is 25). Normally, use port 25, but you can change the port number to suit the email server’s application and operation. For example, the default port number for SMTP connections over SSL is 465. The default port number for SMTP authentication is 587.
   3. SMTP Server Timeout: Sets the timeout in seconds during which this device tries to connect to the SMTP server.
   4. Authentication Protocol: Enables or disables the SMTP authentication protocol or sets POP before SMTP as the authentication type. When selecting On or POP before SMTP, you can select user on the drop-down list. When selecting Other from Authentication as, you can specify Login User Name and Login Password.
   5. POP before SMTP Timeout: Sets the timeout in seconds during which this device tries to connect to the POP3 server. You can configure this item when you selected POP before SMTP as Authentication Protocol.
   6. Connection Test: Tests to confirm that the settings on this page are correct. When Test button is clicked, this machine tries to connect to the SMTP server.
   7. Domain Restriction: Activate or deactivate to restrict domains. Click Domain List button to configure. Enter a domain name that is permitted or rejected. You can also specify the E-mail addresses.

4. Configure POP3 Settings. Make the following settings:
   1. Check Interval: Displays the interval, in minutes, for connecting to the POP3 server to check for incoming e-mails at specific interval. Specify the interval of performing checks in the range from 3 minutes to 60 minutes. The default is 15 minutes.
   2. Run once now: Click Receive button to immediately receive E-mail from the POP3 server. When Remote Printing is set to Permit, the machine prints the received E-mail.
   3. Domain Restriction: Activate or deactivate to restrict domains. Click Domain List button to configure. Enter a domain name that is permitted or rejected. You can also specify the E-mail addresses.
   4. POP3 User Settings: Click Settings button and configure the following user settings.
      a) E-mail Address: Enter the E-mail address.
      b) POP3 Server Name: Enter the POP3 server host name or IP address. If you use the host name, you must first specify the DNS server information.
      c) POP3 Port Number: Enter the port number that POP3 will use (default is 110). Normally, use port 110, but you can change the port number to suit the email server’s application and operation. For example, the default port number for POP3
over SSL is 995.
d) **POP3 Server Timeout**: Enter the timeout in seconds during which this machine tries to connect to the POP3 server.
e) **Login User Name**: Enter the login name of the user for the POP3 account.
f) **Login Password**: Enter the password to log in the POP3 account.
g) **Use APOP**: Enables or disables APOP. APOP is an encryption mechanism used for encrypting the Login Password during communication with the POP3 server. When Use APOP is Off, the Login Password is sent using plain ASCII text. When Use APOP is On, the Login Password is encrypted, therefore cannot be read. APOP requires that the POP3 server supports APOP, and has APOP enabled.
h) **Connection Test**: This will test one transmission for each press, attempting to establish communication with the POP3 server.
i) **E-mail Size Limit**: Enter maximum E-mail size in kilobytes. When the value is 0, the limitation for E-mail size is disabled.
j) **Cover Page**: Specifies whether to print the body of an E-mail in addition to the attached files. When this item is set to On, the attached files and the body of an E-mail are printed. When no attached files exist, only the body of an E-mail is printed. When this item is set to Off, only the attached files are printed. When no attached files exist, nothing is printed.

5. **You can configure settings for Transmission.** Make the following settings:

   1. **Transmission Type**: Allows to choose a method of sending from Specify for Each Destination, Via Server - On, and Via Server - Off (Direct SMTP).
   2. **Direct SMTP Sender Address**: Enters the sender address who send the E-mail used by Direct SMTP.
   3. **Direct SMTP Port Number**: Enter the port number used by Direct SMTP. The default port number is 25.
   4. **Direct SMTP Timeout**: Sets the timeout time in seconds during which this device retries to connect to the SMTP server.

6. **You can configure settings for Reception.** Make the following settings:

   1. **Direct SMTP Port Number**: Enter the port number used by Direct SMTP. The default port number is 25.
   2. **Direct SMTP Timeout**: Sets the timeout time in seconds during which this device retries to connect to the SMTP server.

7. **You can configure settings for E-mail Send Settings.** This section includes the following items for configuration:

   1. **E-mail Size Limit**: Enter the maximum size of E-mail to send in Kilobytes. When the value is 0, the limitation for E-mail size is disabled.
   2. **Sender Address**: Displays the sender address used for E-mails sent from this machine. To configure a Sender Address, go to E-mail Address on the POP3 User Settings page.
   3. **Signature**: Displays the signature to insert in the end of the E-mail body. To configure a signature, go to E-mail Send Settings on the E-mail Settings page.
   4. **Function Default**: The default settings can be changed in Common/Job Default Settings page.

8. **Click Submit button.**

### Send and Forward

When sending a FAX, FTP, SMB, i-FAX or a E-mail job, Send and Forward automatically forwards the same job to a destination specified.
General

1. Click **Send and Forward** under **Function Settings** on the navigation menu. The **Send and Forward Settings** page opens.

2. This section includes the following items for configuration.

   **Send and Forward**

   Switches Send and Forward **On** or **Off**.

   **Rule**

   Selects any of **E-mail**, **Folder (SMB)**, **Folder (FTP)**, **FAX**, **i-FAX (Via server - On)**, and **i-FAX (Via server - Off)** to apply the Send and Forward.

3. Click **Submit** button.

Destination

1. Click **Send and Forward** under **Function Settings** on the navigation menu. The **Send and Forward Settings** page opens.

2. This section includes the following items for configuration.

   **Address Book**

   Click **Address Book** icon and select a type and a name of the address on the address page.

   **E-mail**

   Email forwards the E-mail to the E-mail address entered. Click **E-mail** icon to specify an E-mail address. You can change the address by clicking **Address Book**. Click **Submit** button to finalize settings.

   **Folder**

   Forwards and saves a job in a folder (SMB or FTP). Enter the Host Name, Port Number, path to a folder, Login User Name, and the Login Password. You can confirm the connection status by clicking **Test** button. You can also edit an address by clicking **Address Book**. Click **Submit** button to finalize settings.

   If you use the host name, you must first specify the DNS server information.

   **Delete**

   Deletes the address selected.

3. Click **Submit** button.

Forward Job Settings

1. Click **Send and Forward** under **Function Settings** on the navigation menu. The **Send and Forward Settings** page opens.

2. This section includes the following items for configuration.

   **Color Selection**

   This selects color mode for scanning and storing. **Auto Color (Color/Grayscale)** and **Auto Color (Color/B & W)** allow you identify color for the original document to
scan. You can manually select **Full Color**, **Grayscale**, or **Black & White** to forcibly switch color mode.

### Scan Resolution

Specifies the resolution for scanning. The resolutions available differ depending on the model, current color mode, and the saving format of files. To scan in full color or grayscale with a solution of 400 dpi or greater, the internal memory must be expanded for some models.

### File Format

Selects file type to stored the scanned document.

### Image Quality

Selects the image quality when saving a scanned document **1 Low Quality (High Comp.)** to **5 High Quality (Low Comp.)**.

### PDF Encryption

Apply encryption to the PDF files to send-and-forward. When turned **On**, this page allows the following settings:

1. **Compatibility**: You can change the PDF version by choosing a compatibility option when you save a job in PDF.
2. **Password to Open Document**: When you set a Document Open password, anyone who tries to open the PDF must type in the password you specify. Set to **On** and enter a Document Open password.
3. **Password to Edit/Print Document**: You can set a password to restrict recipients to print or edit the document, or copy its contents, such as images. Recipients don't need a password to open the document, but they must type the password to accomplish one of these restricted actions to the document, respectively.
4. **Printing Allowed**: Restrict printing of the document.
5. **Change Allowed**: Restrict editing of the document.
6. **Copying of Text/Images/Others**: Allow copying objects including images and text for pasting into other document.

### PDF/A

Turns PDF/A-compliant format **Off**, **PDF/A-1a**, **PDF/A-1b**, **PDF/A-2a**, **PDF/A-2b**, **PDF/A-2u** or when File Format above is PDF. PDF/A is an electronic file format for long-term preservation of documents as addressed in the ISO 19005-1 specification.

### File Separation

Scans a multi page document and saves each page as a separate file.

### E-mail Subject

The Subject is entered here.

### FTP Encryption TX

This enables or disables encryption for communication. When turned **On**, the encryption algorithm that is selected by **Network Security Settings** page is used.

3. Click **Submit** button.
RX/Forward Rules

Conditional reception/forwarding is a function for automatically forwarding documents received by FAX or i-FAX to other FAX machines, sending them as attachments to E-mail, or saving them into a fax box instead of printing if they satisfy the specified conditions.

For example, you can forward faxes from particular customers received during business hours to the E-mail addresses of the people responsible for those customers, print and save them in a fax box if they are received outside business hours, and forward faxes from outside of your business area to the business office nearest to the sender's fax number.

For models that do not support RX/Forward Requirements, the documents received are forwarded to a forward destination or printed.

Enabling RX/Forward Rules

To use the RX/Forward Rules function, enable this setting.

1. Click RX/Forward Rules under Function Settings on the navigation menu. The Settings page opens.
2. Click Settings button. RX/Forward Rules Settings page opens.
   - Select Off, Use Rule for Specific RX, or Rule for All RX from the drop-down list.
   - When you select Rule for All RX, you can configure Schedule, File Name, Forward Settings and Print Settings as rules. For details, refer to Add Rule shown below.
3. Click Submit button.

Add Rule

1. Click Add Rule button. The New Rule - Property page appears.
2. This section includes the following items for configuration.

   Use Rule

   Select On when you use the new rule.

   General

   Configure the general information on the rule.
   1. Rule Number: Enter the rule number from 001 to 100.
   2. Rule Name: Enter the rule name.
   3. Priority: Select the priority of the rule from the drop-down list.

   Rule Settings

   Configure the rule settings.
   1. Rule Type: Select FAX Sub Address, FAX Number, Reception Port or i-FAX Address.
   2. Sub Address: Displays when you select FAX Sub Address as Rule Type. Enter the sub address.
   3. FAX Number: Displays when you select FAX Number as Rule Type. After selecting rule, enter the fax number.
   4. Reception Port: Displays when you select Reception Port as Rule Type. Select Port 1 or Port 2.
5. **i-FAX Address**: Displays when you select **i-FAX Address** as **Rule Type**. After selecting rule, enter the i-FAX address.

**Schedule**

Configure the schedule for the specified rule.
1. **Schedule**: Select **All Day** or **Preset Time**.
2. **Start Time, End Time**: You can configure the setting when you select Preset Time as Schedule. Specify the time table from the drop-down list.

**File Name**

Configure the file name created when forwarding.
1. **File Name**: Enter the file name.
2. **Additional Information**: Select the additional information on the file name from the drop-down list.

**Forward Settings**

Configure the forward destination. Select the destination on the list, and then click the **Delete** icon.
1. **Forwarding**: Select **On** and click the desired address button to specify the forwarding destination.
2. **Address Book**: Click **Address Book** button to open the **Addresses** page. Select the desired Address Book and click **Submit** button.
3. **E-mail**: Click **E-mail** button to open the **E-mail** page. Enter E-mail Address and E-mail Address (Confirmation), and then click **Submit** button.
4. **Folder**: Click **Folder** button to open the **Folder** page.
   - **Protocol**: Select **SMB** or **FTP**.
   - **Host Name**: Enter the host name. If you use the host name, you must first specify the DNS server information.
   - **Port Number**: Enter the port number from 1 to 65535.
   - **Path**: Enter the path of the folder.
   - **Login User Name**: Enter the login user name.
   - **Login Password**: Enter the login password.
   - **Connection Test**: Click **Test** button to confirm the connection to the folder.
5. **FAX**: Click **FAX** button to open the **FAX** page.
   - **FAX Number**: Enter the fax number.
   - **Sub Address**: Enter the sub address.
   - **Password**: Enter the password for the sub address.
   - **TX Start Speed**: Select **33600 bps**, **14400 bps**, or **9600 bps**.
   - **ECM**: Select **On** to use ECM communication.
   - **Encryption Box**: Select **On** to use the encryption box. You can configure this setting when the encryption key is selected on **Encryption**.
   - **Encryption Box No.**: Enter the box number (4 digits). You can configure this setting when the encryption key is selected on **Encryption** and **Encryption Box** is set to **On**.
6. **i-FAX**: Click **i-FAX** button to open the i-FAX page.
   - **i-FAX Address**: Enter the i-FAX address.
   - **Via Server**: Select **On** to send i-FAX via server.
   - **Connection Mode**: Select **Simple** or **Full**.
   - **Resolution**: Select **200 x 100 dpi**, **200 x 200 dpi**, **200 x 400 dpi**, **400 x 400 dpi** or **600 x 600 dpi**.
   - **Compression**: Select **MH**, **MR**, **MNR**, or **JBIG**.
   - **Paper Size**: Select **A4/Letter**, **B4**, or **A3/Ledger**.
7. **File Format**: Select **PDF**, **TIFF**, **XPS** or **OpenXPS** as the file format from the drop-down list.
8. **PDF Encryption**: Select **On** to use PDF encryption function. Configure the following settings as necessary.
   - **Compatibility**: Select **Acrobat 3.0 and later** or **Acrobat 5.0 and later**.
   - **Password to Open Document**: Select **On** to set the password to open the document, enter the password, and enter the password again for confirmation.
   - **Password to Edit/Print Document**: Select **On** to set the password to edit or print the document, enter the password, and enter the password again for confirmation. Select **Printing Allowed** or **Changes Allowed** from the drop-down list. Select **Enable** to permit to copying of text or images on **Copying of Text/Images/Others**.

9. **PDF/A**: You can configure the setting if PDF Encryption is Disable. Select **Off** or **Off, PDF/A-1a, PDF/A-1b, PDF/A-2a, PDF/A-2b, PDF/A-2u** or from the drop-down list.

10. **File Separation**: Select **Each Page** or **Off**.

11. **E-mail Subject Additional Info.**: Select the additional information from the drop-down list.

12. **FTP Encryption TX**: Select **On** to use the FTP encryption transmission function. If you use this setting, activate SSL on the **Network Security** page under **Security Settings**.

**Print Settings**

Configure the print settings for received documents with rules.

1. **Print**: Select **On** to print the received documents with rules.

2. **Copies**: You can configure this setting when **Print** is set to **On**. Enter the copies of documents to print.

**Storing in FAX Box Settings**

Configure the storing settings to the fax box.

1. **Storing in FAX Box**: Select **On** to store the received documents with rules to the fax box.

2. **FAX Box**: You can configure this setting when **Storing in FAX Box** is set to **On**. Click **Box List** button to open the **FAX Boxes** page and select the fax box.

3. Click **Submit** button.

**Edit Property of the Rule**

1. Click the Rule No. or Rule Name. The **Property** page opens.

2. Edit the settings of the rule as necessary.

3. Click **Submit** button.

**Edit Other Property of the Rule**

1. Click **Settings** on the **Rule for Specific RX** page. The **Other - Property** page opens.

2. Edit the settings of the rule as necessary.

3. Click **Submit** button.

**Delete Rule**

1. Click the checkbox o the left of the Rule No. and click **Delete** icon.

    Click **Check All** icon to select all the rules and click **None** icon to deselect all the rules.

2. A confirmation message appears. Click **OK**.
Function Settings

Change Priority of the Rule

1. Click the checkbox on the left of the Rule No. and select the rule.
2. Click Raise Priority or Lower Priority button.

Operation Panel

This section explains how to customize the operation panel.

Customize Status Display

2. This section includes the following items for configuration.

   Printing Jobs
   
   In Column 1 and Column 2, enter the job name, user name, print pages x copies, color/black & white, or printed pages, respectively.

   Sending Jobs
   
   In Column 1 and Column 2, enter the destination, job name, user name, original pages or color/black & white, respectively.

   Stored jobs
   
   In Column 1 and Column 2, enter the job name, user name, original pages or color/black & white, respectively.

3. Click Submit button.

Function Key Settings

2. This section includes the following items for configuration.

   Function Key 1
   
   The copy function is assigned as a default setting. You can register the other function on this key.

   Function Key 2
   
   The send function is assigned as a default setting. You can register the other function on this key.

   Function Key 3
   
   The fax function (option) is assigned as a default setting. You can register the other function on this key.

   Note: Some machine products appears Copy Function, Send Function, and FAX Function respectively as a default setting instead of Function Key 1 (to 3). You can enable or disable the each key on the machine.
Copy Function
You can enable or disable the Copy key on the machine.

Sending Function
You can enable or disable the Send key on the machine.

FAX Function
You can enable or disable the Fax key on the machine.

3. Click Submit button.

Home
2. This section includes the following items for configuration.
   Customize Desktop
   Click Add function, Add Program, then Add Application button, and add an item. Up to 8 items can be added per screen, 40 in total. Click Submit button to finalize settings. Click Delete icon to delete the items that are not needed. Up and Down button allow to interchange the items in order.

   Customize Taskbar
   Specifies the items to show in the task bar. Activate and deactivate each of Status/Job Cancel, Device Information, Language, Paper Settings, Wi-Fi Direct, System Menu, Help, Program, Accessibility Screen, and Message Board. Note: The supported value will change according to the model type.

   Background
   Allows you to change the background image of the Home screen. Select an image from the Picture 1 to Picture 8 on the drop-down list.

3. Click Submit button.

Quick Setup Registration
2. This section includes the following items for configuration. By default, each function is assigned with its standard items.
   Copy
   Each of Key 1 to Key 6 is assigned with one of the copying functions. Select an item from the drop-down list.

   Send
   Each of Key 1 to Key 6 is assigned with one of the sending functions. Select an item from the drop-down list.
Function Settings

Fax

Each of Key 1 to Key 6 is assigned with one of the fax functions. Select an item from the drop-down list.

Store Document in Box

Each of Key 1 to Key 6 is assigned with one of the Store Document in Box functions. Select an item from the drop-down list.

Print Document in Box

Each of Key 1 to Key 6 is assigned with one of the Print Document in Box functions.

Send Document in Box

Each of Key 1 to Key 6 is assigned with one of the Send Document in Box functions. Select an item from the drop-down list.

3. Click Submit button.
8 Network Settings

This page is accessible when you have logged in the embedded server with administrator privilege, while network authentication or local authentication is enabled.

If needed, make the following settings: See below for detailed information.

- General
- TCP/IP
- Protocols

General

This section includes basic settings for networking.

1. Click General under Network Settings on the navigation menu. The General page opens.
2. Select Wired Network, Optional Network or Wi-Fi from the Primary Network (Client) drop-down list.
3. The current communication status is shown in Host Name. Configure the host name on the System Settings page of Device Settings.
4. The host name is shown in NetBIOS Name. You can modify the name as necessary.
5. Select Auto, 10BASE-Half, 10BASE-Full, 100BASE-Half, 100BASE-Full and 1000BASE-T from the LAN Interface drop-down list depending on your network environment.
6. The current status is shown in Client Certificate. To make advanced settings, click Settings button. Select the appropriate certificate on the Certificate Settings page that will open. When you click Certificates, its content is displayed.
   - Click Submit button.
   - Configure the device certificate on the Certificates page.
7. Click Submit button.

TCP/IP

This section includes advanced settings for the TCP/IP protocol.

* If the settings for the item marked with an asterisk (*) has been changed, you must restart the machine or the network. To restart the machine, proceed to the Reset page.

General Settings (Wired Network)

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.
2. Select On to use TCP/IP on the wired network.
3. Click Submit button.

**General Settings (Wireless Network)**

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.
2. Select On to use TCP/IP on the wireless network.
3. Click Submit button.

**General Settings (Common)**

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.
2. When an IP address that was mapped by the DNS server has been changed, Dynamic DNS automatically remaps the host name to the IP address. To activate the Dynamic DNS Settings, set Dynamic DNS to On.
3. Click Submit button.

**Proxy settings**

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.
2. To configure the proxy, set Proxy to On, and specify the following items as necessary.
   - **Automatically Detect**
     Select On when you detect the proxy server automatically.
   - **Use Automatic Configuration Script**
     Select On and enter the address when you use the automatic configuration script.
   - **Proxy Server (HTTP)**
     Enter the host name or IP address for the proxy server (HTTP). If you use the host name, you must first specify the DNS server information.
   - **Port Number**
     Enter the port number for the proxy server (HTTP).
   - **Use the Same Proxy Server for All Protocols**
     Select On when you use the same proxy server for all protocols.
   - **Proxy Server (HTTPS)**
     Enter the host name or IP address for the proxy server (HTTPS). If you use the host name, you must first specify the DNS server information.
   - **Port Number**
     Enter the port number for the proxy server (HTTPS).
Do Not Use Proxy for Following Domains

Enter the domain address which do not use the proxy. Use a semicolon (;) between multiple addresses.

3. Click Submit button.

IPv4 settings (Wired Network)

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.

2. This section includes the following items for configuration.

DHCP/BOOTP

Specifies whether or not to automatically obtain an IP address using DHCP or BOOTP.

Auto-IP

When the Auto-IP is set to On, the IP address from 169.254.0.1 through 169.254.255.254 will usually be generated by itself. But if the IP address using DHCP server or Manual settings has been decided and becomes a candidate as the result of configuration, the Auto-IP address isn’t generated and decided even when the Auto-IP is set to On.

If the IP address has already been entered in IP Address using Manual settings, delete the address.

To enable the settings, restart network. Automatically-generated IP address appears on Configuration page under Device Information on navigation menu.

IP Address

If DHCP/BOOTP is set to Off, then a static IPv4 address can be entered in this field as part of the system network settings. When DHCP/BOOTP is set to On, a dynamic IPv4 address is assigned to the device, and the field is grayed out. The format of the IPv4 address is a sequence of numbers separated by dots.

For example: 192.168.110.171

Subnet Mask

Specifies the subnet mask. When DHCP/BOOTP is turned On, a dynamic IPv4 address is assigned to the device, and the field is grayed out.

Domain Name

Specifies the domain name of the domain to which the printing system belongs. It should not contain the host printer name, for example, "abcde.com". abcde.com.

When DHCP/BOOTP is turned On, a dynamic IPv4 address is assigned to the device, and the field is grayed out.

3. Click Submit button.

IPv4 settings (Wireless Network)

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.

2. This section includes the following items for configuration.
Network Settings

**DHCP/BOOTP**

Specifies whether or not to automatically obtain an IP address using DHCP or BOOTP.

**Auto-IP**

When the Auto-IP is set to On, the IP address from 169.254.0.1 through 169.254.255.254 will usually be generated by itself. But if the IP address using DHCP server or Manual settings has been decided and becomes a candidate as the result of configuration, the Auto-IP address isn’t generated and decided even when the Auto-IP is set to On.

If the IP address has already been entered in IP Address using Manual settings, delete the address.

To enable the settings, restart network. Automatically-generated IP address appears on Configuration page under Device Information on navigation menu.

**IP Address**

If DHCP/BOOTP is set to Off, then a static IPv4 address can be entered in this field as part of the system network settings. When DHCP/BOOTP is set to On, a dynamic IPv4 address is assigned to the device, and the field is grayed out. The format of the IPv4 address is a sequence of numbers separated by dots.

For example: 192.168.110.171

**Subnet Mask**

Specifies the subnet mask. When DHCP/BOOTP is turned On, a dynamic IPv4 address is assigned to the device, and the field is grayed out.

**Domain Name**

Specifies the domain name of the domain to which the printing system belongs. It should not contain the host printer name, for example, "abcde.com". abcde.com. When DHCP/BOOTP is turned On, a dynamic IPv4 address is assigned to the device, and the field is grayed out.

3. Click Submit button.

**IPv4 settings (Common)**

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.

2. This section includes the following items for configuration.

**Default Gateway**

Specifies the IP address of the default gateway. When DHCP/BOOTP is turned On, a dynamic IPv4 address is assigned to the device, and the field is grayed out.

**DNS Server (Primary, Secondary)**

Specifies the IP addresses of the primary and secondary DNS (Domain Name System) servers. When DHCP/BOOTP is turned On and Use DNS Server from DHCP is selected, you can select to use the DNS server obtained via DHCP. When DHCP/BOOTP is turned On and Use following DNS Server is selected, you can enter static DNS server information in the Primary and Secondary fields provided.
DNS Search Suffix (Primary, Secondary)

Specifies the primary and secondary DNS (Domain Name System) search suffix. When DHCP/BOOTP is turned On, you can select DNS Search Suffix (Primary) or Use following DNS Search Suffix. When DHCP/BOOTP is turned On and Use following DNS Search Suffix is selected, you can enter static DNS search suffix in the Primary and Secondary fields provided.

WINS Servers (Primary, Secondary)

Specifies the IP addresses of the primary and secondary WINS (Windows Internet Name Service) servers. When DHCP/BOOTP is turned On and Use WINS Server from DHCP is selected, you can select to use the WINS server obtained via DHCP. When DHCP/BOOTP is turned On and Use following WINS Server is selected, you can enter static WINS server information in the Primary and Secondary fields provided.

Host Name

Specifies how to get a host name. When you want to get a host name from the DHCP server, select Use Host Name from DHCP. When you want to get a host name using device setting, select Use Host Name from Device Setting.

3. Click Submit button.

IPv6 Settings (Wired Network)

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.

2. This section includes the following items for configuration:

   IPv6

   Specifies whether or not to enable the IPv6 protocol. Select On to use the IPv6 protocol.

   IP Address

   A static IPv6 address can be entered in this field for the device as part of the system network settings. Assigns an IPv6 address to the printing system network component. The format of the IPv6 address is a sequence of numbers (128 bit in total) separated by colons, e.g. 2001:db8:3c4d:15::1a2c:1a1f.

   Prefix Length

   Specifies the IPv6 prefix length. It can be a decimal value between 0 and 128.

   RA(Stateless)

   When the RA(Stateless) is set to On and the network infrastructure provides the IPv6 address prefix in the Router Advertise information, the IPv6 stateless address will be generated on the print system.

   DHCPv6 (Stateful)

   When the DHCPv6(Stateful) is set to On and the network infrastructure provides the "Managed address configuration", the IPv6 stateful address (128-bit length) will be assigned to the print system by DHCPv6 server.
Network Settings

Domain Name

Specifies the domain name of the domain to which the printing system belongs. You can enter the domain name when DHCPv6 (Stateful) is turned Off.

3. Click Submit button.

IPv6 Settings (Wireless Network)

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.

2. This section includes the following items for configuration.

   IPv6

   Specifies whether or not to enable the IPv6 protocol. Select On to use the IPv6 protocol.

   IP Address

   A static IPv6 address can be entered in this field for the device as part of the system network settings. Assigns an IPv6 address to the printing system network component. The format of the IPv6 address is a sequence of numbers (128 bit in total) separated by colons, e.g. 2001:db8:3c4d:15::1a2c:1a1f.

   Prefix Length

   Specifies the IPv6 prefix length. It can be a decimal value between 0 and 128.

   RA(Stateless)

   When the RA(Stateless) is set to On and the network infrastructure provides the IPv6 address prefix in the Router Advertise information, the IPv6 stateless address will be generated on the print system.

   DHCPv6 (Stateful)

   When the DHCPv6(Stateful) is set to On and the network infrastructure provides the "Managed address configuration", the IPv6 stateful address (128-bit length) will be assigned to the print system by DHCPv6 server.

   Domain Name

   Specifies the domain name of the domain to which the printing system belongs. You can enter the domain name when DHCPv6 (Stateful) is turned Off.

3. Click Submit button.

IPv6 Settings (Common)

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.

2. This section includes the following items for configuration.

   Default Gateway

   Specifies the IPv6 address of the default gateway.
Network Settings

DNS Server (Primary, Secondary)

Specifies the IP addresses of the primary and secondary DNS (Domain Name System) servers. When DHCPv6 (Stateful) is turned On and Use DNS Server from DHCP is selected, you can select to use the DNS server obtained via DHCP. When DHCPv6 (Stateful) is turned On and Use following DNS Server is selected, you can enter static DNS server information in the Primary and Secondary fields provided.

DNS Search Suffix (Primary, Secondary)

Specifies the primary and secondary DNS (Domain Name System) search suffix. When DHCPv6 (Stateful) is turned On, you can select DNS Search Suffix (Primary) or Use following DNS Search Suffix. When DHCP/BOOTP is turned On and Use following DNS Search Suffix is selected, you can enter static DNS search suffix in the Primary and Secondary fields provided.

3. Click Submit button.

Bonjour Settings

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.

2. This section includes the following items for configuration.

   Bonjour

   Select On or Off, and then select Wired Network, Wi-Fi or Wi-Fi Direct as Available Network.

   Bonjour Name

   When Bonjour is turned On, Bonjour Name is shown. You can modify the name as necessary.

3. Click Submit button.

IP Filter (IPv4)

This page allows you to configure IP filters. IP filters restrict access to the printing system based on the IP addresses and protocols.

Specify the IP addresses or network addresses of the hosts to which access is granted. If nothing is specified on this page, access from all hosts is allowed.

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.

2. Click Settings button. The IP Filters (IPv4) page opens. This section includes the following items for configuration.

   IP Address (IPv4)

   Specifies the IP address or network address to be permitted.

   Subnet Mask

   Specifies the subnet mask to be permitted. When there are no entries, access is allowed to all.
To allow access to a network, enter the network IPv4 address, and the subnet mask. An example of the data format for the .CSV file is: To permit access from all hosts on network 192, enter "192.0.0.0" for the IP address and "255.0.0.0" for the subnet mask. Subnet mask can be left blank. To allow access to a single IP address, enter the IPv4 address, and "255.255.255.255" for the subnet mask.

**Protocols**

Specifies the protocol by which an access is granted. The following protocols can be selected.

- LPD
- FTP
- IPP
- ThinPrint
- HTTP
- Raw
- SNMP
- IPP over SSL
- HTTPS

Note: ThinPrint appears only when an optional ThinPrint is activated.

3. Click **Submit** button.

**IP Filter (IPv6)**

This page allows you to configure IP filters. IP filters restrict access to the printing system based on the IP addresses and protocols.

Specify the IP addresses or network addresses of the hosts to which access is granted. If nothing is specified on this page, access from all hosts is allowed.

1. Click **TCP/IP** under **Network Settings** on the navigation menu. The **TCP/IP Settings** page opens.

2. Click **Settings** button. The **IP Filters (IPv6)** page opens. This section includes the following items for configuration.

**IP Address (IPv6)**

Speccifies the IP addresses to which access is granted. When there are no entries, access is allowed to all. The number of addresses that can be specified depends on the IPv6 network address along with the prefix length setting. IPv6 address filtering:

To filter a single IPv6 address: Enter the desired IPv6 address, along with a prefix length of 128.

**Prefix Length**

Specifies the IPv6 prefix length. It can be a decimal value between 0 and 128.

**Protocols**

Specifies the protocol by which an access is granted. The following protocols can be selected.

- LPD
- FTP
- IPP
- ThinPrint
- HTTP
 Network Settings

- Raw
- SNMP
- IPP over SSL
- HTTPS

Note: ThinPrint appears only when an optional ThinPrint is activated.

3. Click Submit button.

Logical printers

This page allows you to configure the Logical Printers. This machine can be used as a virtual printer for converting ASCII print data to PostScript data or for adding and/or replacing a character strings (commands) at the beginning or end of job data. Up to four logical printers can be set.

Logical Printer is used with one of the following print protocols: FTP, LPR, IPP, IPPS, SMB (NetBEUI) and RAW. If no port is specified for printing, the default port used will be Logical Printer 1 (LP1), port 9100.

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.

2. Click Settings button. The Logical Printers page opens. This section includes the following items for configuration:

TCP/IP Port Number

Specifies the port number for the logical printer as well as the TCP raw port number (9100, etc.). Conversion is applied to data that is input to the specified raw port in accordance with the selected logical printer. This port is invalid if it is given a port number that is the same as that of an already specified port (For example, FTP or LPD).

Bi-directional Printing

Bi-directional Printing can be set to On or Off when printing to the TCP/IP RAW port. When Bi-directional Printing is Off, all Send data is discarded. In order to have the data that is received from the printer returned to the client when printing with PostScript, PJL and other such commands, it is necessary to set Bi-directional Printing is On.

Start of Job String

Specifies the character string sent to the printer after output, directly to the output port (lp port). This character string is used when it is necessary to transmit a control code before the print data is sent.

End of Job String

Specifies the character string sent to the printer after output, directly to the output port (lp port). This character string is used when it is necessary to transmit a control code after the print data is sent.

3. Click Submit button.

IPSec Settings

1. Click TCP/IP under Network Settings on the navigation menu. The TCP/IP Settings page opens.
This section allows you to set access restrictions for IPSec protocol-based communication.

Specifies whether or not to enable the IPSec protocol. Select **On** to use the IPv6 protocol. Select **Off** when encryption is not used.

2. This section includes the following items for configuration.

**Expiration Verification**

When this option is enabled, the expiration of the server certificate is verified at communicating. If found expired, communication will fail. When it is disabled, the expiration will not be verified.

**Restriction**

Specifies the default policy for non-IPSec packets. Select **Allow** to allow communication with all hosts and networks including those not permitted by the rules. Select **Deny** to allow communication only with the hosts and networks permitted by the rules. **Allowed** means normal traffic (not defined by the IPSec rules) will be allowed to reach the device. **Denied** means only IPSec traffic (as defined by the IPSec rules) will be allowed to reach the device and all other traffic (not defined by the IPSec rules) will be denied to reach the device.

**Root Certificate**

Displays whether the certificate is active. **Root Certificate 1 Subject** through **Root Certificate 5 Subject** are displayed. Configure the device certificate on the **Certificates** page.

**IPSec Rules**

Allows to validate the rule used for communication using the IPSec protocol. **Rule 1** through **Rule 10** are displayed. To activate this item, click **Settings** button and configure the following on the IPSec Rule Settings page.

1. **Policy**

   **Rule**: Select whether the rules for IPSec communication are used or not.

   **Key Management Type**: Select a type of the key used for the rule from **IKEv1**, **IKEv2**, and **Manual**.

   **Encapsulation Mode**: **Transport** encapsulates an encrypted data and transmits along with an IP header. This is the simplest method when both the transmitting host and receiving host have the IPSec protocol supported. **Tunnel** uses a gateway provided in the network. The gateway receives the IP packets sent by the transmitting host, encrypt the entire IP packet which is then encapsulated by IPSec, then transmits along with a new IP header.

   Select whether the rules for IPSec communication are used or not.

2. **IP address**

   **IP Version**: Specifies the IP version of the other end. Select **IPv4** or **IPv6**.

   **IP Address (IPv4)**: Specifies the IPv4 addresses of the hosts or network with which the print system is connecting via IPSec. When you are restricting the scope of IPSec, be sure to specify the IP addresses. If this field is blank, all IPv4 addresses will be allowed to connect the print system.

   **Subnet Mask**: When **IPv4** is selected for **IP Version**, this specifies the subnet mask of the hosts or network with which the print system is connecting via IPSec. If this field is blank, the specified addresses are considered to be host addresses.

   **IP Address (IPv6)**: Specifies the IPv6 addresses of the hosts or network with which the print system is connecting via IPSec. When you are restricting the scope of IPSec, be sure to specify the IP addresses. If this field is blank, all IPv6 addresses will be allowed to connect the print system.
Prefix Length: When IPv6 is selected for IP Version, this specifies the prefix length of the hosts or network with which the print system is connecting via IPSec. If this field is blank, the specified addresses are considered to be host addresses.

Remote Peer Address: If Tunnel is selected in Encapsulation Mode, assign an IP address that is remotely controlled.

3. Authentication: Configures the local side authentication when IKEv1 is selected as Key Management Type. To set a character string as the shared key and use it for communication, select Pre-shared Key and enter the string of the pre-shared key in the text box. To use the CA-issued Device Certification or Root Certificate, select the Certificates. When Certificates is selected, the availability of the device certificate is shown. To make advanced settings, click Settings button and select a certificate. Configure the device certificate on the Certificates page of Security Settings.

Configures the local side and remote side authentication when IKEv2 is selected as Key Management Type. Configure Authentication Type, Local ID Type, Local ID, Device Certificate and Pre-shared Key on Local Side, and Authentication Type, Remote ID Type, Remote ID and Pre-shared Key on Remote Side.

4. Key Exchange (IKE phase1): When using IKE phase1, a secure connection with the other end is established by generating ISAKMP SAs. Configure the following items so that they meet the requirement of the other end.

Mode: Configures this item when IKEv1 is selected as Key Management Type. Main Mode protects identifications but requires more messages to be exchanged with the other end. Aggressive Mode requires fewer messages to be exchanged with the other end than Main Mode but restricts identification protection and narrows the extent of the parameter negotiations. When Aggressive Mode is selected and Pre-shared Key is selected for Authentication Type, only host addresses can be specified for IP addresses of the rule.

Hash: Selects the hash algorithm.

Encryption: Selects the encryption algorithm.

Diffie-Hellman Group: The Diffie-Hellman key-sharing algorithm allows two hosts on an unsecured network to share a private key securely. Select the Diffie-Hellman group to use for key sharing.

Lifetime (Time): Specifies the lifetime of an ISAKMP SA in seconds.

5. Data Protection (IKE phase2)

In IKE phase2, IPSec SAs such as ESP or AH are established by using SAs established in IKE phase1. Configure the following items so that they meet the requirement of the other end.

Protocol: Select ESP or AH for the protocol. ESP protects the privacy and integrity of the packet contents. Select the hash algorithm and encryption algorithm below. AH protects the integrity of the packet contents using encryption checksum. When you select AH as Protocols, you cannot use the AES-GCM-128, 192, or 256. Select the hash algorithm below.

Hash: Selects the hash algorithm. When you select AES-GCM-128, 192, or 256 on Encryption, you have to select the AES-GCM-128, 192, or 256 or the AES-GMAC-128, 192, or 256 corresponding to the same bit.

Encryption: Selects the encryption algorithm. (When ESP is selected under Protocol.) When you select the AES-GCM-128, 192, or 256 on Hash, you have to select the AES-GCM-128, 192, or 256 corresponding to the same bit. When you select the AES-GMAC-128, 192, or 256 on Hash, you have to select the AES-GCM-128, 192, or 256 corresponding to the same bit. If you do not select any algorithm, the machine authenticates without encryption.

PFS: When PFS is turned On (enabled), even if a key is decrypted, the decrypted key cannot be used to decrypt the other keys generated after the decryption. This improves the safety, but imposes a heavy burden because of more key-generation processes.

Diffie-Hellman Group: When PFS is turned On (enabled), select the Diffie-Hellman Group to use.

Lifetime Measurement: Select Time or Time & Data Size.
Network Settings

**Lifetime (Time):** Configure the lifetime of IPSec SA in seconds.

**Lifetime (Data Size):** Configure this item when **Time & Data Size** selected as **Lifetime Measurement.** Configure the lifetime (data size) of IPSec SA in kilobytes.

**Extended Sequence Number:** Determines whether a sequence number is 64-bit extended by IPSec. To execute, select **On.**

6. **Manual:** If **Key Management Type** is set to **Manual,** configure:

   - Protocol, Hash, Encryption, SPI Format, SPI for Inbound, SPI for Outbound, Key Format, Authentication Key for Inbound, Authentication Key for Outbound, Encryption Key for Inbound, Encryption Key for Outbound.

Click **Submit** button to finalize settings.

3. Click **Submit** button.

**Protocol**

This section includes advanced settings for various protocols used as the communication procedures and communication protocols.

*: If the settings for the item marked with an asterisk (*) has been changed, you must restart the machine or the network. To restart the machine, proceed to the **Reset** page.

1. Click **Protocol** under **Network Settings** on the navigation menu. The **Protocol Settings** page opens.

2. This section includes the following items for configuration.

**Print Protocols**

Configure the protocols used for printing. This section includes the following items for configuration:

1. **NetBEUI:** The NetBEUI protocol allows Peer-to-peer printing (SMB Print). With this protocol enabled, the printing system is created in Windows Network Neighborhood. NetBEUI is an enhanced version of the NetBIOS protocol, which is used for transport of SMB protocol. Enables or disables the NetBEUI protocol. If NetBEUI is turned **On,** the name resolution by NetBIOS (NMB) becomes available.

   - **Available Network:** Select **Wired Network, Wi-Fi** and **Wi-Fi Direct** as the available network for NetBEUI protocol.

   - **Workgroup:** Workgroup represents the workgroup which will appear in **Entire Network** in "Windows Network Neighborhood."

   - **Comment:** You can enter comments here. (This can be left blank.)

2. **LPD:** To enables the LDAP protocol, turn this item **On.**

   - **Available Network:** Select **Wired Network, Wi-Fi** and **Wi-Fi Direct** as the available network for LPD protocol.

3. **FTP Server (Reception):** FTP is a communications protocol for transmitting files over a Network. To enables the FTP protocol, turn this item **On.**

   - **Available Network:** Select **Wired Network, Wi-Fi** and **Wi-Fi Direct** as the available network for FTP protocol.

4. **IPP:** IPP is a protocol which performs transmission and reception of printing data and configuration of printing systems through TCP/IP networks including the Internet. To enables the IPP protocol, turn this item **On.**

   - **Available Network:** Select **Wired Network, Wi-Fi** and **Wi-Fi Direct** as the available network for IPP protocol.

   - **Port Number:** Enter the port number. Typically, this should be **631**.(e.g. http://(IP address):631/printers/lp1)
5. **IPP over SSL**: A certificate can be added for communication using the IPP protocol. To enable the IPP protocol, turn this item **On**. To enable this protocol, select **On** on **SSL** of the **Network Security Settings** page. 

**Available Network**: Select Wired Network, Wi-Fi and Wi-Fi Direct as the available network for IPP over SSL. 

**Port Number**: Enter the port number. Typically, this should be **443**. The status of IPP over SSL Certificate is shown. To make advanced settings, click **Settings** button and select a certificate. Click **Submit** button to finalize settings. Configure the device certificate on the **Certificates** page of **Security Settings**. This Certificate can be used in common with IPP over SSL and HTTPS.

6. **IPP Authentication**: When selecting **On**, the device performs user authentication at printing to avoid unauthorized use. To enable this item, select **Local Authentication** or **Network Authentication** as Authentication on the **Authentication Settings** page under **Management Settings** and restart the device. Turn this item **On** and enter **Default User Name**.

7. **Raw**: RAW employs another method of printing over the network like LPR. Typically, RAW uses port 9100 to remotely administer the printer via using SNMP or MIB. To enables the RAW protocol, turn this item **On**. 

**Available Network**: Select Wired Network, Wi-Fi and Wi-Fi Direct as the available network for Raw protocol.

8. **ThinPrint**: Configure this setting whether to use the ThinPrint. Turn this item **On**. 

**Available Network**: Select Wired Network, Wi-Fi and Wi-Fi Direct as the available network for ThinPrint. 

**Port Number**: When you set ThinPrint to **On**, enter the port number. Typically, this should be **4000**. To use ThinPrint over SSL, select **On** on **SSL** of the **Network Security Settings** page. Click **Settings** button to select the Device Certificate. Click **Submit** button to determine the setting. 

Note: ThinPrint appears only when an optional ThinPrint is activated.

9. **WSD Print**: WSD is a new networking protocol provided with Windows Vista for discovery of the printing systems and data exchange for printing. To enable the WSD protocol, turn this item **On**. 

**Available Network**: Select Wired Network, Wi-Fi and Wi-Fi Direct as the available network for WSD protocol.

10. **POP3 (E-mail RX)**: POP3 is a standard protocol for retrieval of E-mail. POP3 is a standard protocol used by local e-mail clients including the printing system to retrieve E-mail from a remote server over a TCP/IP connection. To enable the POP3 protocol, turn this item **On**. 

**Send Protocols**

Configure the protocols used for sending E-mail. This section includes the following items for configuration:

1. **SMTP (E-mail TX)**: SMTP is an Internet standard for E-mail transmission across Internet Protocol (IP) networks. To enable E-mail transmission using SMTP, turn this item **On**. To configure the POP3 protocol, go to the **E-mail Settings** page under **Function Settings**. To use E-mail printing, activate remote printing on the **Printer Settings** page under **Function Settings**.

   Select a method for **POP3 Security (User #)** from **STARTTLS**, **SSL/TLS**, or **Off** on the drop-down list. To enable this protocol, activate SSL on the **Network Security Settings** page under **Security Settings**.

2. **FTP Client (Transmission)**: FTP (File Transfer Protocol) is a standard network protocol used to transfer files from one host or to another host over a TCP-based network, such as the Internet. To enables the FTP protocol, turn this item **On**. 

   **Port Number**: When you set FTP to **On**, enter the port number. Typically, this should be **21**. To use FTP over SSL, select **On** on **SSL** of the **Network Security Settings** page. Click **Settings** button to select the Device Certificate. Click **Submit** button to determine the setting. 

   Note: FTP appears only when an optional FTP client is activated.
Network Settings

Number: Enter the port number. Typically, this should be 21. By selecting On on FTP Encryption TX, the file transmission is implemented with the algorithms configured in the following. To enable this protocol, activate SSL on the Network Security Settings page under Security Settings.

3. SMB: SMB is a network protocol applied to shared access to files, printers, serial ports, etc. To enables the SMB protocol, turn this item On.

Port Number: Enter the port number. Typically, this should be 445.

4. i-FAX (SMTP and POP3): To enable i-FAX, turn this item On. To configure i-FAX, go to the FAX/i-FAX Settings page under Function Settings.

5. WSD Scan: WSD is a new networking protocol provided with Windows Vista for discovery of the printing systems and data exchange for printing. To enable the WSD protocol, turn this item On.

6. DSM Scan: DSM allows the distributed scan management. The system administrator can use DSM to manage scan services over organizations which have a large number of users. To enable DSM scan, turn this item On. To configure DSM scan, go to the DSM Scan Settings page under Function Settings. To enable this item, select Network Authentication on the Authentication Settings page under Management Settings.

Select a method for LDAP Security (DSM Scan) from Off, STARTTLS, or SSL/TLS on the drop-down list. To enable this item, activate SSL on the Network Security Settings page under Security Settings.

7. eSCL: eSCL is a network protocol used for remote scanning from Mac OS X computer. To enables the eSCL protocol, turn this item On.

Available Network: Select Wired Network, Wi-Fi and Wi-Fi Direct as the available network for eSCL protocol.

8. eSCL over SSL: A certificate can be added for communication using the eSCL protocol. To enable the eSCL over SSL, turn this item On. To enable this protocol, select On on SSL of the Network Security Settings page.

Available Network: Select Wired Network, Wi-Fi and Wi-Fi Direct as the available network for eSCL over SSL.

eSCL over SSL Certificate: The status of eSCL over SSL Certificate is shown. To make advanced settings, click Settings button and select a certificate. Click Submit button to finalize settings.

Configure the device certificate on the Certificates page of Security Settings. This Certificate can be used in common with ThinPrint, HTTPS/IPP over SSL, Enhanced WSD over SSL, eSCL over SSL, and so on.

Other Protocols

This section allows to configure other network protocols. This section includes the following items for configuration:

1. SNMPv1/v2c: The SNMP protocol provides and transfers management information within the network environment. Should an error occur such as Add Paper, the printing system automatically generates a trap, an error message sent to up to two predetermined trap recipients. To enable the SNMPv1/v2 protocol, turn this item On. To configure the SNMPv1/v2 protocol, go to the SNMP Settings page under Management Settings.

Available Network: Select Wired Network, Wi-Fi and Wi-Fi Direct as the available network for SNMP protocol.

2. SNMPv3: The SNMP protocol provides and transfers management information within the network environment. To enable the SNMPv3 protocol, turn this item On. To configure the SNMPv3 protocol, go to the SNMP Settings page under Management Settings.

3. HTTP: HTTP is the protocol to exchange or transfer hypertext between the World Wide Web and web browsers. To enable the HTTP protocol, turn this item On.

Available Network: Select Wired Network, Wi-Fi and Wi-Fi Direct as the available network for HTTP protocol.
4. **HTTPS**: HTTPS (Hypertext Transfer Protocol Secure) is a widely-used communications protocol for secure communication over the Internet. It provides bidirectional encryption of communications between a client web browser and a web server. To enable the HTTPS protocol, turn this item **On**. To enable this item, activate SSL on the **Network Security Settings** page under **Security Settings**. The current status of the certificate is shown in **HTTPS Certificate**. To make advanced settings, click **Settings** button and select a device certificate. Click **Submit** button to finalize settings.

Configure the device certificate on the **Certificates** page under **Security Settings**. This Certificate can be used in common with IPP over SSL and HTTPS.

5. **Enhanced WSD**: Enhanced WSD is an API to simplify connections to web service enabled devices, such as Printers, Scanners and File Shares. To enable Enhanced WSD, turn this item **On**.

**Available Network**: Select **Wired Network**, **Wi-Fi** and **Wi-Fi Direct** as the available network for Enhanced WSD protocol.

6. **Enhanced WSD over SSL**: Enhanced WSD (SSL) is a communication security protocol that provides encryption, authentication, and anti-tampering integrity over the Internet. To enable Enhanced WSD (SSL), turn this item **On**. To enable this item, activate SSL on the **Network Security Settings** page under **Security Settings**.

**Available Network**: Select **Wired Network**, **Wi-Fi** and **Wi-Fi Direct** as the available network for Enhanced WSD over SSL.

**Enhanced WSD over SSL Certificate**: The status of the Enhanced WSD over SSL certificate is shown. To make advanced settings, click **Settings** button and select a device certificate. Click **Submit** button to finalize settings.

Configure the device certificate on the **Certificates** page under **Security Settings**.

7. **LDAP**: The printing system can refer to the address book which is on the LDAP server as an external address book and assign a FAX number and E-mail address to the destination. To enables the LDAP protocol, turn this item **On**. To configure the External Address Book, go to the **External Address Book Settings** page under **Address Book**. To configure advanced settings, go to **Authentication Settings** page under **Management Settings**.

Select a method for **LDAP Security** from **STARTTLS**, **SSL/TLS**, and **Off** on either the **External Address Book #** or **Network Authentication** drop-down list. To enable this item, activate SSL on the **Network Security Settings** page under **Security Settings**.

8. **IEEE802.1X**: IEEE802.1X is a security protocol that allows login to the secured networks based on a client certificate. To enable the IEEE802.1X protocol, turn this item **On**.

To make advanced settings, click **Settings** button. The status of this protocol is shown in the **IEEE802.1X Settings** page. This section includes the following items for configuration:

**IEEE802.1X**

**Tunneled Authentication Protocol**: This protocol is activated when **EAP-TTLS** has been selected for encryption. Select a method of authentication from **MSCHAPV2**, **MSCHAP**, **CHAP**, and **PAP** on the drop-down list.

**Login User Name**: Enter the name of the user to access the printing system. The IEEE802.1X client certificate of this user must be valid.

**Password**: This protocol is activated when **EAP-TTLS**, **EAP-FAST**, or **PEAP(AP-MS-CHAPv2)** has been selected for encryption. Enter the password.

**Common Name**: This protocol is activated when **EAP-TTLS**, **EAP-FAST**, or **PEAP(AP-MS-CHAPv2)** has been selected for encryption. Specifies the common name of the server certificate if the server is required to be authenticated.

**Match Rule of Common Name**: This protocol is activated when **EAP-TTLS**, **EAP-FAST**, or **PEAP(AP-MS-CHAPv2)** has been selected for encryption. When the
server certificate is verified, the common name specified under **Common Name** is compared with the common name on the server certificate. This item allows you to specify whether the common names are considered to be matched if they exactly or partially match.

**Expiration Verification**: When this option is enabled, the expiration of the server certificate is verified at communicating. If the certificate is expired, communication will fail. When it is disabled, the expiration will not be verified.

**IEEE802.1X Client Certificate**: The current status is shown in **IEEE802.1X Client Certificate**. To make advanced settings, click **Settings** button and select a device certificate. Click **Submit** button to finalize settings. Configure the device certificate on the **Certificates** page under **Security Settings**.

**Certificate Status**

**Root Certificate 1 (to 5)**, **IEEE802.1X Client Certificate**: The content of the certificate is shown. Make settings for the Root Certificate on the **Certificates** page under **Security Settings**.

9. **LLTD**: LLTD is a protocol that provides network topology discovery and quality of service diagnostics. To enable the LLTD protocol, turn this item **On**.

**Available Network**: Select **Wired Network**, **Wi-Fi** and **Wi-Fi Direct** as the available network for LLTD protocol.

10. **REST**: REST is an architecture for the web application suitable for the multiple software linkage in the distributed network system. To enables the REST protocol, turn this item **On**.

**Available Network**: Select **Wired Network**, **Wi-Fi** and **Wi-Fi Direct** as the available network for REST protocol.

11. **REST over SSL**: A certificate can be added for communication using the REST protocol. To enable the REST over SSL, turn this item **On**. To enable this protocol, select **On** on **SSL** of the **Network Security Settings** page.

**Available Network**: Select **Wired Network**, **Wi-Fi** and **Wi-Fi Direct** as the available network for REST over SSL.

**eSCL over SSL Certificate**: The status of **eSCL over SSL Certificate** is shown. To make advanced settings, click **Settings** button and select a certificate. Click **Submit** button to finalize settings. Configure the device certificate on the **Certificates** page of **Security Settings**. This Certificate can be used in common with ThinPrint, HTTPS/IPP over SSL, Enhanced WSD over SSL, eSCL over SSL, and so on.

3. Click **Submit** button.

**Wireless LAN**

This section includes advanced settings for the Wi-Fi and Wi-Fi Direct.

* If the settings for the item marked with an asterisk (*) has been changed, you must restart the machine or the network. To restart the machine, proceed to the **Reset** page.

**Wi-Fi Settings**

1. Click **Wireless LAN** under **Network Settings** on the navigation menu. The **Wireless LAN Settings** page opens.

2. This section includes the following items for configuration.

   **Wi-Fi**

   Select **On** when you use the wireless LAN communication using Wi-Fi.
Network Name (SSID)

Enter the SSID (Service Set Identifier) of wireless LAN connects to the device.

Network Authentication

Select the network authentication method from the drop-down list.

Encryption

Configure the encryption method. If you select Open in Network Authentication, select Disable or WEP.
If you select WPA2/WPA-PSK or WPA2/WPA-EAP in Network Authentication, select AES or Auto.
If you select WPA2-PSK or WPA2-EAP in Network Authentication, AES is applied as Encryption.

WEP Key Index

Enter the WEP key index when you select Open in Network Authentication, and WEP in Encryption.

WEP Key

Enter the WEP key index when you select Open in Network Authentication, and WEP in Encryption.

Pre-shared Key

Enter the pre-shared key index when you select WPA2/WPA-PSK or WPA2-PSK in Network Authentication.

3. Click Submit button.

IEEE802.1X

This setting appears when WPA2/WPA-EAP or WPA2-EAP is selected in Network Authentication.

2. This section includes the following items for configuration.

Effective Encryption

Select a method of encryption from EAP-TLS, EAP-TTLS, EAP-FAST and PEAP(AP-MS-CHAPv2) on the drop-down list.

Tunneled Authentication Protocol

This protocol is activated when EAP-TTLS has been selected for encryption. Select a method of authentication from MSCHAPV2, MSCHAP, CHAP, and PAP on the drop-down list.

Login User Name

Enter the name of the user to access the printing system. The IEEE802.1X client certificate of this user must be valid.
Password

This protocol is activated when EAP-TTLS, EAP-FAST, or PEAP(AP-MS-CHAPv2) has been selected for encryption. Enter the password.

Common Name

This protocol is activated when EAP-TTLS, EAP-FAST, or PEAP(AP-MS-CHAPv2) has been selected for encryption. Specifies the common name of the server certificate if the server is required to be authenticated.

Match Rule of Common Name

This protocol is activated when EAP-TTLS, EAP-FAST, or PEAP(AP-MS-CHAPv2) has been selected for encryption. When the server certificate is verified, the common name specified under Common Name is compared with the common name on the server certificate. This item allows you to specify whether the common names are considered to be matched if they exactly or partially match.

Expiration Verification

When this option is enabled, the expiration of the server certificate is verified at communicating. If the certificate is expired, communication will fail. When it is disabled, the expiration will not be verified.

IEEE802.1X Client Certificate

The current status is shown in IEEE802.1X Client Certificate. To make advanced settings, click Settings button and select a device certificate. Click Submit button to finalize settings. Configure the device certificate on the Certificates page under Security Settings.

3. Click Submit button.

Certificate Status

2. This section includes the following items for configuration.

   Root Certificate 1 (to 5), IEEE802.1X Client Certificate

   The content of the certificate is shown. Make settings for the Root Certificate on the Certificates page under Security Settings.

Wi-Fi Direct Settings

2. This section includes the following items for configuration.

   Wi-Fi Direct

   Select On when you use the wireless LAN communication using Wi-Fi Direct.

   Device Name

   Enter the device name (host name).
IP Address

The device's IP address appears.

Persistent Group

Select On when you use the persistent group.
Click Reset button to reset the password for Wi-Fi Direct connection.
Note: You can confirm the password on the Configuration page to click Configuration under Device Information on the navigation menu. You can also confirm the password on the control panel of the machine and the network status page.

Auto Disconnect

Select On when you want to automatically disconnect the handheld device connected using Wi-Fi Direct. Select the desired Day, Hour and Minute from the drop-down list.

3. Click Submit button.
9 Security Settings

This page is accessible when you have logged in the embedded server with administrator privilege, while network authentication or local authentication is enabled.

If needed, make the following settings: See below for detailed information.

- Device Security
- Send Security
- Network Security
- Certificates

Device Security

This section includes settings for device security.

Interface Block

This page allows you to restrict access from each interface.

2. This section includes the following items for configuration.

   Network
   
   Access from the network interface cannot be restricted. Access should be restricted depending on the protocol. For more details, see the Protocol Settings page under Network Settings.

   USB Device
   
   To block accesses from the devices connected to the USB port, select Block.

   USB Host
   
   To block accesses from the USB host devices, select Block.

   USB Storage
   
   To block accesses from the storages connected to the USB port, select Block.

   Parallel I/F
   
   To block accesses from the parallel interface, select Block.

   Option Interface 1
   
   To block accesses from the Option 1 interface, select Block.

   Option Interface 2
   
   To block accesses from the Option 2 interface, select Block.

3. Click Submit button.
Lock Operation Panel

Restricts access from the operation panel.

2. Select the drop-down list, click On or Lock, Partial lock 1, Partial lock 2, Partial lock 3 or Partial Lock, Off or Unlock in the operation remain.

Note: Each model depends on the display.

This section includes the following items for configuration.

On or Lock

Settings related to execution of input and output, jobs and paper are prohibited. To limit partial-use the following Partial lock 1 (-3).

Partial lock 1

Settings related to input/output, such as network settings, system settings, document settings are prohibited. (e.g. the registration/edit of Address book and Document box)

Partial lock 2

Settings related to the run job panel settings, printer settings, in addition to Partial lock 1 limit will be banned. (e.g. stop key use the job cancel)

Partial lock 3 or Partial Lock

Settings related to paper, in addition to the limit of Partial lock 2 is prohibited. (e.g. Cassette Settings, MP Tray Settings)

Off or Unlock

All keys are permitted to use.

3. Click Submit button.

Display Status /Log

Job status, job histories, and FAX communication histories are restricted.

2. This section includes the following items for configuration.

Display Jobs Detail Status

This enables to restrict the progress of job processing in detail. You can select Hide All to allow only the administrators who logged in using administrator privilege to see the jobs status. Show All allows all administrators and users to see the jobs status. Selecting My Jobs Only only allows the user to see the jobs log of his/her own.
Display Jobs Log

This enables to restrict the progress of job processing in detail. You can select Hide All to allow only the administrators who logged in using administrator privilege to see the jobs log. Show All allows all administrators and users to see the jobs log. Selecting My Jobs Only only allows the user to see the jobs log of his/her own.

Display FAX Log

This enables to restrict the history of fax communications. You can select Hide All to allow only the administrators who logged in using administrator privilege to see the history of fax communications. Show All allows all administrators and users to see the logs of fax communications.

3. Click Submit button.

Edit Restriction

The addition, deletion and edition of address book and one touch key are restricted.

2. This section includes the following items for configuration.

   Address Book

   This enables to restrict the editorial control of address book. When you select Off, all user can edit the address book regardless of user priviledges. When you select Administrator Only, only the user with an administrator priviledges can edit the address book.

   One Touch Key

   This enables to restrict the editorial control of one touch key. When you select Off, all user can edit the one touch key regardless of user priviledges. When you select Administrator Only, only the user with an administrator priviledges can edit the one touch key.

3. Click Submit button.

Authentication Security Settings

This section allows to configure the passwords and user accounts for security. These settings can be made when the local authentication is enabled.

2. This section includes the following items for configuration.

   Password Policy Settings

   Sets the password policy.

   1. Password Policy: To set the password policy, set this to On and configure the following.

   2. Maximum password age: Turn to On and select the valid period in the number of days from the drop-down list. 1 – 180 days
3. **Maximum password length**: Turn to On and select the length in the number of characters from the drop-down list. 1 – 64 characters.

4. **Password complexity**: Select the password complexity from No more than two consecutive identical char, At least one uppercase letter (A-Z), At least one lowercase letter (a-z), At least one number (0-9), or At least one symbol.

5. **Password Policy Violated User List**: Clicking the User List button will display a list of users that are in violation of the password policy.

### User Account Lockout Settings

You can assign a specific user account that you want to exclude.

1. **Lockout Policy**: To set the password policy, set this to On and configure the following.

2. **Number of Retries until Locked**: Select the number of password retries until the account is locked, from the drop-down list (1 – 10 times).

3. **Lockout Duration**: Select the time period in minutes until the account is excluded, from the drop-down list (1 – 60 minutes).

4. **Lockout Target**: Select the users that you want to exclude, either All or Remote Login Only.

5. **Locked out Users List**: Clicking the User List button will display a list of users that are excluded.

3. Click Submit button.

### Unusable Time Setting

This determines the time period during which the machine is restricted for use.

2. This section includes the following items for configuration.

**Unusable Time**

Set On to use it. When this is On, the machine is unusable during the time period from Start Time to End Time. To use the machine during this period, an unlock code must be entered.

**Start Time**

Select the time of beginning of unusable time, from the drop-down list.

**End Time**

Select the time of ending of unusable time, from the drop-down list.

**Unlock Code**

Define an unlock code that you can use to temporarily deactivate the unusable time. Enter a digit from 0000 to 9999.

### Data Security Settings

This setting appears when an optional Data Security kit is activated. Click Settings button to open the Password page. Enter the password and click OK button to enable the data security function.
Security Settings

Document Guard Settings

This setting appears when an optional Printed Document Guard Kit(B) is activated. Select On to use the Document Guard.

3. Click Submit button.

Send Security

This section includes settings for security for Sending.

2. This section includes the following items for configuration.

   Dest. Check before Send

   This enables the front panel message which prompts you to confirm the destination to forward the scan data. To enable, select On. The message is displayed when the machine's Start key is pressed to start scanning.

   Entry Check for New Dest.

   When enabled, this determines whether re-entry of a destination for confirmation is required when adding a new destination. To enable, select On.

   New Destination Entry

   Determines whether an entry of a new destination is allowed. Permit activates the entry of a new destination. Prohibit deactivates the entry of a new destination.

   New Destination Entry (FAX)

   This entry becomes active when New Destination Entry has been set to Permit. Permit activates the entry of a new fax destination. Prohibit deactivates the entry of a new fax destination.

   Recall Destination

   Enables or disables recalling the destination. Permit activates the entry of a destination to recall. Prohibit deactivates the entry of a destination to recall.

   Broadcast

   Enables or disables broadcast transmission. Permit activates the broadcast transmission. Prohibit deactivates the broadcast transmission.

3. Click Submit button.

Network Security

This section includes settings for network security.

*: If the settings for the item marked with an asterisk (*) has been changed, you must restart the machine or the network. To restart the machine, proceed to the Reset page.
Network Security Settings

2. This section includes the following items for configuration.

SSL

SSL is a cryptographic protocol that provides communication security between a PC and the machine. To enable, select On. Off deactivates the SSL protocol for communication.

Serverside Settings

Configures security settings on the server side. This section includes the following items for configuration:

1. **TLS Version**: TLS, as well as SSL, is a cryptographic protocol that provides communication security between a PC and the machine. Select the version of TLS that you want to use from **SSL3.0/TLS1.0, TLS1.1, and TLS1.2**. You can use more than one algorithm at a time.

2. **Effective Encryption**: Select an algorithm that you want to use from **ARCFOUR, DES, 3DES, AES and AES-GCM**. You can use more than one algorithm at a time.

3. **Hash**: Select a Hash algorithm of either **SHA1** or **SHA2(256/384)**. You can use more than one algorithm at a time.

4. **HTTP Security**: Specifies the security level for HTTP.
   - **Secure Only (HTTPS)**: Encrypts all HTTP protocol communications. Only the URLs that begin with https:// are accessible. If a URL beginning with http:// is specified, it will be automatically redirected to "https://".
   - **Not Secure (HTTPS & HTTP)**: Enables access for both encrypted and unencrypted HTTP protocol communication. URLs beginning with either “https://” or “http://” are accessible. The former URL establishes encrypted communication and the latter establishes unencrypted communication.

5. **IPP Security**: Specifies the security level for IPP.
   - **Secure Only (IPPS)**: Encrypts all HTTP protocol communications.
   - **Not Secure (IPPS & IPP)**: Enables access for both encrypted and unencrypted IPP protocol communications.

6. **Enhanced WSD Security**: Specifies the security level for Enhanced WSD.
   - **Secure Only (Enhanced WSD over SSL)**: Encrypts all Enhanced WSD over SSL protocol communications.
   - **Not Secure (Enhanced WSD over SSL & Enhanced WSD)**: Enables access for both Enhanced WSD over SSL and Enhanced WSD protocol communications.

7. **eSCL Security**: Specifies the security level for eSCL.
   - **Secure Only (eSCL over SSL)**: Encrypts all eSCL over SSL protocol communications.
   - **Not Secure (eSCL over SSL & eSCL)**: Enables access for both eSCL over SSL and eSCL protocol communications.

8. **REST Security**: Specifies the security level for REST.
   - **Secure Only (REST over SSL)**: Encrypts all REST over SSL protocol communications.
   - **Not Secure (REST over SSL & eSCL)**: Enables access for both REST over SSL and REST protocol communications.

Clientside Settings

Configures security settings on the client (PC) side. This section includes the following items for configuration:

1. **TLS Version**: TLS, as well as SSL, is a cryptographic protocol that provides communication security between a PC and the machine. Select the version of TLS...
that you want to use from SSL3.0/TLS1.0, TLS1.1, and TLS1.2. You can use more than one algorithm at a time.

2. **Effective Encryption**: Select an algorithm that you want to use from ARCFOUR, DES, 3DES, AES and AES-GCM. You can use more than one algorithm at a time.

3. **Hash**: Select a Hash algorithm of either SHA1 or SHA2(256/384). You can use more than one algorithm at a time. When more than one algorithm are selected, the machine selects one algorithm to automatically connect to the server.

4. **Certificate Verification**: When set to **On**, this verifies the expiration of the server certificate during communication. If the certificate is expired, communication will fail. When set **Off**, the expiration will not be verified.

   Note: When the SSL is set to **On** and HTTP Security is set to **Secure Only** (HTTPS), the document boxes cannot be accessed by the TWAIN driver.

3. Click **Submit** button.

### Network Access Settings

2. This section includes the following items for configuration.

   **Filtering/ Firewall**

   Filtering and firewall settings can restrict the network access to the device so that only the specific network addresses are allowed. For details, see the IP Filter(IPv4) Settings and IP Filter(IPv6) Settings pages of the TCP/IP Settings page under Network Settings.

   **SNMPv1/v2c**

   The SNMP Read and Write Community settings function as passwords to control read and write access to the device via SNMP. For more information, see the SNMP Settings page under Management Settings.

   **SNMPv3**

   The SNMPv3 communication settings are used to control the authentication and encryption communication that occur via SNMP. For more information, see the SNMP Settings page under Management Settings.

   **SSL**

   To enable SSL, settings for Secure Protocols must be made. For more information, see SSL of the Network Security Settings page.

   **IEEE802.1X**

   To enable IEEE802.1X, you must first make the IEEE802.1X settings. For more information, see the IEEE802.1X Settings page of the Protocol Settings page under Network Settings.

   **IPSec**

   To enable IPSec, you must first make the IPSec settings. For more information, see the TCP/IP Settings page under Network Settings.

3. Click **Submit** button.
Certificates

This page allows you to create, update, or check details on a certificate. After you have changed this setting, you must restart the network or this machine.

When you browse the Embedded Web Server by entering "https", a screen which confirms whether or not to authenticate the security certificate of the web site appears. You can select the following to solve the problem by configuring certificate.

- Temporary solution: Permit every time the attention message displayed with first access to the Embedded Web Server.
- Permanent solution: Import the device certificate or root certificate as the trusted certificate into the client PC. The Web Browser will authenticate the Embedded Web Server's certificate automatically in advance.

*: If the settings for the item marked with an asterisk (*) has been changed, you must restart the machine or the network. To restart the machine, proceed to the Reset page.

Device Certificate

1. Click Certificates under Security Settings on the navigation menu. The Certificates page opens.

2. A list of the device certificates will be shown, allowing you to check the following: Device Certificate 1 is automatically issued by default. The automatically issued certificate has the country code, common name, and a validity period of about 10 years already configured.

   Status

   Displays whether the certificate is active.

   Subject

   Displays the country code and common name.

   Expiration

   Displays the validity period of the certificate.

   Protocol

   Displays the protocols available (HTTPS, IPP over SSL, Enhanced WSD (SSL), IEEE802.1X, ThinPrint, DSM Scan, IPsecRuleX, and other protocols).

3. This section includes the following items for configuration.

   Device Certificate 1 (to 5)

   This sections allows you to modify the initial settings, add a new one, and delete the existing settings.

   Click Settings button of Device Certificate 1 (to 5). The Device Certificate 1 (to 5) page opens to show the current status. This page allows the following settings:

   Status: Displays whether the certificate is active.

   Expiration: Displays the validity period of the certificate.

   View Certificate: Click View button to view the details of the certificate.

   Create Self Certificate: Click Create button to open the Certificate Settings page. Enter or select the information for settings. Country Code, State/Province, Locality Name, Organization Name, Organization Unit Name, Common Name, E-
mail Address, Current Universal Time (UTC/GMT), Validity Period, and Key Length are displayed automatically. Key Length is the information needed to generate encryption, in length of either 1024 or 2048 bits. Click Submit button to finalize settings.

Edit Certificate: Click Edit button to open the Expiration Settings page. Enter the validity period. Current Universal Time (UTC/GMT) is displayed automatically. Click Submit button to finalize settings.

Delete Certificate: When you click Delete button, the certificate is displayed. Delete the content.

Export Certificate: When you click Export button, the dialog screen is displayed. Save the certificate.

Root Certificate 1 (to 5)

Allows you to create, configure, register, or delete the certificate.

1. Click Settings button of Root Certificate 1 (to 5). The Root Certificate 1 (to 5) Settings page opens to show the current status. This page allows the following settings:
   - **Status**: Displays whether the certificate is active.
   - **Expiration**: Displays the validity period of the certificate.

   Import Certificate: Click Import button to open the File Import page. Click Browse button and select a file to import in Import Root Certificate 1 (to 5) file. Click Submit button to finalize settings.

2. To delete a device certificate of Device Certificate 2 (to 5), highlight the certificate and click Delete button.

   Note: A certificate can be assigned to a protocol or a configuration.
10 Management Settings

This page is accessible when you have logged in the embedded server with administrator privilege, while network authentication or local authentication is enabled.

If needed, make the following settings: See below for detailed information.

- Job Accounting
- Authentication
- ID Card
- Notification/Report
- History Settings
- SNMP
- System Stamp
- Message Board
- Reset

Job Accounting

This section includes advanced settings for Job Accounting.

Settings

To enable Job Accounting, you must first make the Job Accounting settings.

1. Click Job Accounting under Management Settings on the navigation menu. The Settings page opens.
2. Click Settings button. The Job Accounting Settings page opens. This section includes the following items for configuration.

   Job Accounting
   
   Turn to On to activate Job Accounting.

   Job Accounting Access
   
   To execute Job Accounting using network authentication, select Network.

Action Settings

This section includes the following items for configuration:

1. **Apply Limit**: Select the behavior of processing a job when the maximum print pages have been reached, from **Immediately**, **Subsequently**, and **Alert Only**.
2. **Copier/Printer Count**: You can select how the copying and printing page counts are shown – either the total of both or each of copying and printing individually.
3. **Unknown ID Job**: Select the behavior of processing a job that has an unknown account ID or has no account ID, from **Permit** and **Reject**.

3. If you have set Job Accounting to On in step 2 above, Default Counter Limit and Count by Paper Size are displayed.
4. You can configure settings for Default Counter Limit. Enter the initial value for the counter limit, from 1 to 9999999.
5. Configures **Count by Paper Size**. If needed, make the following settings for **Paper 1 to 5**:

   1. **Paper 1 (to 5)**: To aggregate printed pages depending on the size, select **On**.
   2. **Page Size**: Select a paper size to aggregate the printed pages, from the drop-down list.
   3. **Media Type**: Select a media type to aggregate the printed pages, from the drop-down list.

6. Click **Submit** button.

**Local Job Accounting List**

This section includes settings for adding and deleting an account and for departmental accounting.

**Add Account**

To aggregate pages by a department or all departments, accounts must be added.

1. Click **Add Account** icon. The **New Account - Property** page opens.

2. You can configure settings for **Account Property**. This section includes the following items for configuration:

   **Account Name**

   Enter the account name.

   **Account ID**

   Enter the Account ID.

3. You can configure settings for **Restriction**.

   1. Select how the functionalities are restricted for use, from **Off**, **Counter Limit**, and **Reject Usage**.
   2. Enter the initial value for restricting functionalities, from 1 to 9999999.

4. Click **Submit** button.

**Delete**

1. Click the checkbox to the left of the **Account ID**. To select all items at once, click **Check All**.

2. Click **Delete** icon once.

**Counter**

1. Click the checkbox to the left of **Account ID**.

2. Click **Counter** icon once. The total number of copies accounted for the account is displayed.

3. You can view the results of accounting.

**Printed Pages**

   From the drop-down list, select **Printed Pages by Function**, **Printed Pages by Paper Size**, or **Printed Pages by Layout** as needed for assign a limit.
Scanned Page Counts
Shows the total scanned pages of Copy, FAX, and Other Scan.

FAX Counter
Shows the total pages and times of sending faxes.

Counter Reset
Click Reset button to reset the counters.

4. Click Counter button of Other Account or Total Account to view the result accounting.

Other Account
The total number of copies accounted for other account is displayed.

Total Account
The total number of copies accounted for all account is displayed.

Authentication
This section includes advanced settings for authentication.

Settings
To enable authentication, you must first make the authentication settings.

1. Click Authentication under Management Settings on the navigation menu. The Settings page opens.

2. Click Settings button. The Authentication Settings page opens. This section includes the following items for configuration.

   General
   For Authentication, select one of Off, Local Authentication and Network Authentication from the drop-down list.

   Action Settings
   For processing unknown ID jobs, select either Permit or Reject. To configure this, go to the Job Accounting Settings page.

3. If you have selected Local Authentication in General in step 2 above, switch Local Authorization On or Off.

   If you have selected Network Authentication in General in step 2 above, configure the following settings.

   1. Configure the Network Authentication Server.
      Host Name: Enter the host name or IP address of the network authentication server. If you use the host name, you must first specify the DNS server information.
      Port Number: Enter the port number of the network authentication server.
      Server Type: Select the server type from the drop-down list. When you use ID Card, select Ext..
Management Settings

**Default Domain**: Click Domain List button to open the Domain List page. Enter the domain name and click Submit button. If you have entered the several domain names, you can select it from the drop-down list.

2. Configure the PIN Login Settings. You can configure this setting if you select Ext. as a server type.
   - PIN Login: Select On or Off.

3. Configure the Network User Settings.
   - Obtain Network User Property: Select On or Off.

4. Click Server Settings button to configure the server settings.
   - LDAP: Confirm that LDAP is set to On. If the setting is Off, switch to On in the Protocol Settings page under Network Settings.
   - LDAP Server Name: Enter the LDAP server name or IP address.
   - LDAP Port Number: Enter the LDAP port number.
   - Search Timeout: Enter the search timeout in seconds.
   - LDAP Security: Configure this setting in the Protocol Settings page under Network Settings.

5. Configure the Acquisition of User Information. Enter Name 1, Name 2, or Email Address.
6. Click Submit button.
7. If you configure the Group Authorization Settings, select On in Group Authorization, and click Group List button. Select the group for authorization, click Submit button.

4. You can configure settings for Group Authorization Settings.

   **Group Authorization**
   
   Switches Group Authorization On or Off.

   **Group List**
   
   Click Group List button to open the Group List page. Click a group name to authorize from the Group List. The Property page opens.

5. You can configure settings for Group Property.

   **Group ID**
   
   Change the group ID as desired.

   **Group Name**
   
   Change the group name as desired.

   **Access Level**
   
   Select Administrator or User as an access level.

   **Copy Restriction**
   
   Select Off or Reject Usage as desired.

   **Copy Restriction (Color)**
   
   Select Off or Reject Usage as desired.

   **Copy Restriction (Full Color)**
   
   Select Off or Reject Usage as desired.
Print Restriction

Select Off or Reject Usage as desired.

Print Restriction (Full Color)

Select Off or Reject Usage as desired.

Duplex Restriction

Select Off or Permit 2-sided Only as desired.

Combine Restriction

From the drop-down list, select Off, Permit 2 in 1 and 4 in 1 Only, or Permit 4 in 1 Only.

EcoPrint Restriction

Select Off or Permit EcoPrint Only as desired.

Send Restriction

Select Off or Reject Usage as desired.

FAX Restriction

Select Off or Reject Usage as desired.

Storing Restriction in Box

Select Off or Reject Usage as desired.

Storing Restriction in Memory

Select Off or Reject Usage as desired.

7. 
Click Submit button, and then Back button.

8. 
You can configure settings for Guest Authorization Settings.

   Guest Authorization

   Switches Guest Authorization On or Off.

   Guest Settings

   Click Guest Settings button to configure advanced settings for guests.

9. 
You can configure settings for Guest Property.

   1. User Name: Type a User name.
   2. Access Level: Select User if the user is not an administrator.
   3. Account Name: From the drop-down list that is displayed by clicking Account List button, select an account name followed by Submit button.
   4. Click Submit button.

10. 
You can configure settings for Authorization.

   Copy Restriction

   Select Off or Reject Usage as desired.
Copy Restriction (Color)
Select Off or Reject Usage as desired.

Copy Restriction (Full Color)
Select Off or Reject Usage as desired.

Print Restriction
Select Off or Reject Usage as desired.

Print Restriction (Full Color)
Select Off or Reject Usage as desired.

Duplex Restriction
Select Off or Permit 2-sided Only as desired.

Combine Restriction
From the drop-down list, select Off, Permit 2 in 1 and 4 in 1 Only, or Permit 4 in 1 Only.

EcoPrint Restriction
Select Off or Permit EcoPrint Only as desired.

Send Restriction
Select Off or Reject Usage as desired.

FAX Restriction
Select Off or Reject Usage as desired.

Storing Restriction in Box
Select Off or Reject Usage as desired.

Storing Restriction in Memory
Select Off or Reject Usage as desired.

11. Click Submit button, and then Back button.

12. You can configure settings for Unknown User Settings.

Unknown ID Job
For processing unknown ID jobs, select either Permit or Reject.

Unknown User Settings
Click Unknown User Settings button. The Unknown User-Property page opens.

User Name
Change the user name as desired.
Account Name

Click Account List button to open the Account page. Select an account and click Submit button.
Note: Account Name is displayed when Job Accounting is set to On.

Print Restriction
Select Off or Reject Usage as desired.

Print Restriction (Full Color)
Select Off or Reject Usage as desired.

15. Click Submit button, and then Back button.

16. You can configure settings for Simple Login Settings.

Simple Login
Switches Simple Login On or Off.

Simple Login Key List
Click Simple Login Key List button to open the Simple Login Key List page.

17. Click Settings button of Key 1 (to 20). Configure the following settings as necessary.

Display Name
Enter the user name displayed on the Simple Login Key List.

Icon
Select the user icon displayed on the Simple Login Key List from the drop-down list.

Password
Select On or Off.

Authentication
For Authentication, select one of Local Authentication and Network Authentication from the drop-down list.

User
When selecting Local Authentication from Authentication drop-down list, click User List button to open the User List page. Select the user from the list and click Submit button.

Login User Name
When selecting Network Authentication from Authentication drop-down list, enter the login user name to access the authentication server.
Management Settings

Login Password
When selecting **Network Authentication** from **Authentication** drop-down list, enter the login password to access the authentication server.

Domain
When selecting **Network Authentication** from **Authentication** drop-down list, select the domain from the drop-down list.

18. Click **Submit** button, and then **Back** button.

Local User List
The user information can be added or modified on the local user list.

Add User
This adds a new user. Up to 1000 users can be registered.

1. Click **Add User** icon. The **New User - Property** page opens.
2. You can configure settings for **User Property**. This section includes the following items for configuration:

   **User Name**
   Enter the name displayed on the user list (up to 32 characters).

   **Login User Name**
   Enter the user ID to log in (up to 64 characters). You cannot duplicate a login user name to register.

   **Password**
   Enter the password to log in (up to 64 characters).

   **Confirm Password**
   To confirm the password, enter the same password that was entered in **Password**.

   **Access Level**
   Select either **Administrator** or **User** for privilege.

   **Account Name**
   From the drop-down list that is displayed by clicking **Account List** button, select an account name followed by **Submit** button.

   **E-mail Address**
   Add a user's e-mail address. To enable sending e-mail, add your e-mail address. The e-mail address will be automatically selected whenever an e-mail notice is required by functionality.

   **Language**
   Select either **English**, **Deutsch**, **Français**, **Español**, **Italiano**, **Nederlands** or **РУССКИЙ** for the user interface language, from the drop-down list.
Default Screen

Select an item for the default screen from the drop-down list.

Default Screen (Send/FAX)

In Default Screen (Send/FAX), when clicking FAX or Send to open a drop-down list, this item appears. Select either Destination, Machine Address Book or External Address Book from the drop-down list.

Note: If the optional fax kit is not installed, Default Screen (Send) appears. Address Book may appear instead of Machine Address Book according to the machine type.

Address Book Type

In Default Screen (Send/FAX), click Address Book to open a drop-down list. Select either Machine Address Book or External Address Book.

Note: Ext Address Book1(to 4) reflects the external address book names configured on the External Address Book 1(to 4) Settings page.

Authorization

Configure settings for Authorization by referring step 7 of Settings on page 87.

3. Click Submit button.

Delete

1. Click the checkbox to the left of the user name. To select all items at once, click Check All icon.

2. Click Delete icon once.

ID Card

This section includes advanced settings for ID Card authentication.

ID Card Settings

To use the ID Card authentication, you must first make the ID Card settings.

1. Click ID Card under Management Settings on the navigation menu. The ID Card Settings page opens.

2. Configure the Authentication Settings.

Keyboard Login

For keyboard login, select Prohibit or Permit.

Additional Authentication

Select Off, Use Password or Use PIN.

Note: Password Authentication appears instead of Additional Authentication according to the machine type. Select On to use the password authentication.

3. Configure the ID Card Settings. Select IDM or FeliCa as the ID Card Read Type.

4. Configure the FeliCa Settings.
System Code 1
Enter the System Code 1 from 0000 to FFFF.

Service Code 1
Enter the Service Code 1 from 0000 to FFFF.

Number of Blocks in Use.
Enter the number of blocks in use from 1 to 255.

System Code 2
Enter the System Code 2 from 0000 to FFFF.

Service Code 2
Enter the Service Code 2 from 0000 to FFFF.

Number of Blocks in Use.
Enter the number of blocks in use from 1 to 255.

Configure the System Code 2 as necessary.

5. Click Submit button.

Notification/Report

This section includes advanced settings for attentions and reports.

Notification/Report Settings

2. You can configure settings for Management Report. This item is shown only when an optional Fax kit is installed.

   **Outgoing FAX Report**
   Select either On or Off.

   **Incoming FAX Report**
   Select either On or Off.

   **E-mail/Folder**
   From the drop-down list, select Off, On, or Error Only. If an error occurs during transmission, Error Only allows a transmission result reported by e-mail and stored in the folder.

   **FAX / i-FAX**
   From the drop-down list, select Off, On, Error Only, or Specify Each Job. If an error occurs during transmission, Error Only allows printing a transmission result.
Attach Image

Select either Off, Partial Image, or Full Image.

Canceled before Sending

Select either On or Off.

Recipient Format

Select either Name or Destination or Name and Destination.

FAX/i-FAX RX

From the drop-down list, select Off, On, or Error/Storing in Box. If an error occurs during reception or received draft is forwarded to fax box, Error/Storing in Box allows a receive result reported by e-mail or report.

Report Type

Select either Print Report or E-mail.

E-mail Address

Enter the e-mail address.

5. You can configure settings for Job Finish Notice.

Attach Image

Select either On or Off.

Equipment ID

Enter the equipment ID.

Recipient E-mail Address

Enter the E-mail address to receive the maintenance reports. Use a semicolon (;) between multiple addresses.

Subject

Enter the Subject of the report.

Maintenance Report Interval

From the drop-down list, select one of None, Monthly, Weekly, Daily, Hourly as desired.
For Monthly, check the month and select a date and a time from the Day and Time drop-down lists, respectively.
For Weekly, select a day of the week and a time from the Day and Time drop-down lists, respectively.
For Daily, select a time from the Time drop-down list.
For Hourly, select a time from the every Hour drop-down list.
Run once now

A maintenance report will be sent to a recipient once automatically when clicking Send.

7. Configure Event Reports/Schedule Reports 1 (to 3) as follows.

Reports 1 (to 3) E-mail Address
Enter the E-mail address for the first recipient.

Subject
Enter the Subject of the report using a variable.

Event Report
Select an item for the event report in Event Report Items and select an interval of sending a report in Event Report Interval.

Scheduled Report
Select Counter Status to attach the counter report.

Scheduled Report Interval
From the drop-down list, select one of None, Monthly, Weekly, Daily, Hourly as desired.
For Monthly, check the month and select a date and a time from the Day and Time drop-down lists, respectively.
For Weekly, select a day of the week and a time from the Day and Time drop-down lists, respectively.
For Daily, select a time from the Time drop-down list.
For Hourly, select a time from the every Hour drop-down list.

Run once now
A schedule report will be sent to the recipients 1 to 3 once automatically when clicking Send button.

8. Click Submit button.

History Settings

This section includes advanced settings for histories.

History Settings

1. Click History Settings under Management Settings on the navigation menu. The History Settings page opens.

2. Determines whether the Job Log History is sent or not.

Recipient E-mail Address
The E-mail address of the recipient of reports. If there are more than one recipient, then the addresses should be separated by a semicolon (;).

Subject
Enter the subject for the Job Log History.
SSFC Subject

Enter the subject for the Job Log History using the ID Card authentication.

Auto Sending

Determines whether the job log report is sent or not. Select either On or Off.

Number of Records

Enter the number of job logs for sending.
Note: Each model depends on the display.

Personal Information

Determines whether personal information are included in job logs. Select Include or Exclude as desired.

Run once now

A job log will be sent to a recipient once automatically when clicking Send button.

3. You can configure settings for Login History Settings.

Login History

Select either On or Off.

Recipient E-mail Address

The E-mail address of the recipient of logs. If there are more than one recipient, then the addresses should be separated by a semicolon (;).

Subject

Enter the subject for the Login History.

Auto Sending

Determines whether the job log is sent. Select either On or Off.

Number of Records

Set the number of Login Histories for sending, from 1 to 1000.

View History

A Login History List will be shown when clicking View button.

Run once now

A Login History will be sent to a recipient once automatically when clicking Send button.

4. You can configure settings for Device Log History Settings.

Device Log History

Select either On or Off.
Recipient E-mail Address

The E-mail address of the recipient of logs. If there are more than one recipient, then the addresses should be separated by a semicolon (;).

Subject

Enter the subject for the Device Log History.

Auto Sending

Determines whether the Device Log History is sent or not. Select either On or Off.

Number of Records

Set the number of Device Log Histories for sending, from 1 to 1000.

View History

A Device Log History List will be shown when clicking View button.

Run once now

A Device Log History will be sent to a recipient once automatically when clicking Send button.

5. You can configure settings for Secure Communication Error Log History Settings.

Secure Communication Error Log History

Select either On or Off.

Recipient E-mail Address

The E-mail address of the recipient of logs. If there are more than one recipient, then the addresses should be separated by a semicolon (;).

Subject

Enter the subject for the Secure Communication Error Log History.

Auto Sending

Determines whether the Secure Communication Error Log History is sent. Select either On or Off.

Number of Records

Set the number of Secure Communication Error Log Histories for sending, from 1 to 1000.

View History

A Secure Communication Error Log History List will be shown when clicking View button.

Run once now

A Secure Communication Error Log History will be sent to a recipient once automatically when clicking Send button.

6. Click Submit button.
This section includes advanced settings for SNMP.

If the settings for the item marked with an asterisk (*) has been changed, you must restart the machine or the network. To restart the machine, proceed to the Reset page.

**SNMP Settings**

1. Click SNMP under Management Settings on the navigation menu. The SNMP Settings page opens.
2. Configure SNMPv1/v2c as follows.

**SNMPv1/v2c**

Activate or deactivate the SNMPv1/v2c protocol. Select either On or Off in the Protocol Settings page under Network Settings. To configure SNMP v1/v2, proceed as follows.

**Read Community**

Enter the community name for SNMP requests to read a value. The default name is ‘public’. After you have changed the setting, you must restart the printing system.

**Write Community**

Enter the community name for SNMP requests to write (change) a value. The default name is ‘public’. After you have changed the setting, you must restart the printing system.

**sysContact**

The MIB-II sysContact object. Usually this is the E-mail address of the network administrator.

**sysName**

The MIB-II sysName object. Usually this is the host or domain name of the printing system.

**sysLocation**

The MIB-II sysLocation object. Usually this is the location information of the printing system which is described under Location of System Settings page. Go to the System Settings page under Device Settings to modify the settings.

**HP Web Jetadmin Compatibility**

Turns HP Web Jetadmin Compatibility On or Off. After you have changed the setting, you must restart the printing system.

**Authentication Traps**

Specifies whether to use authentication traps. If enabled (On), an SNMP trap is generated when an attempt to read or write is made using an incorrect community name. The trap is sent to the configured trap address. After you have changed the setting, you must restart the printing system.
Management Settings

3. Configure SNMPv3 as follows. After you have changed the setting, you must restart the printing system.

SNMPv3

Sets whether to use the SNMPv3 protocol. Select either On or Off in the Protocol Settings page under Network Settings. To configure SNMP v3, proceed as follows.

Authentication

Sets whether the user authentication is performed in SNMP communication.

Hash

Select either MD5 or SHA1 for Hash algorithm. This item becomes active when the Authentication is set to On.

Privacy

Sets whether to encrypt the communicated data in SNMP communication. This becomes available when Authentication is set to On.

Encryption

Select either DES or AES for encryption algorithm. This item becomes active when the Authentication is set to On.

Read Only User

Enter User Name and Password of the read-only user.

Read/Write User

Enter User Name and Password of the read/write user.

4. Click Submit button.

System stamp

This section includes advanced settings that apply to the system stamp.

System stamp settings

The system stamps include character and serial numbered stamps. Both are applied to printing, sending, and storing jobs. For example, the following describes how to apply the character and serial numbered stamps to a printing job.

Setting a Character Stamp

1. Click System Stamp under Management Settings on the navigation menu. The System Stamp Settings page opens.

2. To apply a character stamp to a print job, proceed as follow. Select On or Off and click Settings button.
1. **Stamp Settings**: Select a type of stamps from the drop-down list. Select **Text** or **Entry** to enter a text for the stamp.

2. **Stamp Method Settings**: Select either **Each Print Page** or **Each Original Page** to show the stamp.

3. **Position Settings**: Select the position and rotation for the stamp.
   - **Position**: Select how the stamp is positioned on the page, from the drop-down list.
   - **Nudge**: Nudge the stamp in range of -10 to +10, from right to left or up and down, as you exactly intend to position on the page.
   - **Back page**: Select **Mirror Front Page** or **Same as Front Page** as desired.
   - **Rotation**: Select **Clockwise** or **Counterclockwise** and enter the angle as desired.

4. **Font Settings**: Select the typography for the characters of the stamp.
   - **Font Type**: From the drop-down list, select **Courier** or **Letter Gothic** as desired.
   - **Font Size**: From the drop-down list, select 64.0 pt, 48.0 pt, or 24.0 pt.
   - **Bold**: Select either **On** or **Off**.
   - **Italic**: Select either **On** or **Off**.
   - **Color**: Select the color for the text from the drop-down list.
   - **Character Border**: Select the type of borders for the text from the drop-down list.
   - **Display Pattern**: From the drop-down list, select **Transparent**, **Clipping**, or **Overwrite**.
   - **Density**: Select the transparency of the character stamp, from the drop-down list. The less the value, the more the stamp becomes transparent.

3. **Creating a Bates Stamp**

1. Click **System Stamp** under **Management Settings** on the navigation menu. The **System Stamp Settings** page opens.

2. To serial-number the printed pages, proceed as follow. Select **On** or **Off** and click **Settings** button.

   1. **Stamp Settings**: Add or delete properties of the stamp for serial numbering as follows.
      - **Add Stamp**: You can add **Date**, **User ID**, **Serial Number**, **Numbering**, and **Text 1** or **Text 2** to a stamp.
      - **Date Format**: Select a format of date from the drop-down list.
      - **Text**: Enter a text in **Text 1** or **Text 2** for the serial numbered stamp.
   2. **Numbering Settings**: Select the numbering properties of the bates stamp.
      - **Fixed Digit Number**: Select a number of digits to fix from the drop-down list.
      - **Numbering Default**: Enter the initial value of the serial number.
   3. **Position Settings**: Select the position for the stamp.
      - **Position**: Select how the stamp is positioned on the page, from the drop-down list.
      - **Nudge**: Nudge the stamp in range of -10 to +10, from right to left or up and down, as you exactly intend to position on the page.
      - **Back Page**: Select **Mirror Front Page** or **Same as Front Page** as desired.
   4. **Font Settings**: Select the typography for the characters and the display pattern of the stamp.
      - **Font Type**: From the drop-down list, select **Courier** or **Letter Gothic** as desired.
      - **Font size**: From the drop-down list, select 14.0 pt, 12.0 pt, or 10.5 pt.
      - **Bold**: Select either **On** or **Off**.
      - **Italic**: Select either **On** or **Off**.
      - **Color**: Select the color for the text from the drop-down list.
      - **Display Pattern**: From the drop-down list, select **Transparent**, **Clipping**, or **Overwrite**.
      - **Density**: Select the transparency of the character stamp, from the drop-down list. The less the value, the more the stamp becomes transparent.
3. Click Submit button. To cancel settings, click Back button.

Stamp Default Settings

1. Click System Stamp under Management Settings on the navigation menu. The System Stamp Settings page opens.
2. To change the stamp default settings, click Settings button in Default Settings.
   1. Text Stamp: Add or delete the text stamp as follows.
      Text 1 (to 10): Enter the text for text stamp. To remove the text stamp, delete the text in Text 1 (to 10).
   2. Font Size: Enter the following font size.
      Page #: Enter Font Size 1 (to 3) for page number in range of 6.0 to 64.0 pt as necessary.
      Text Stamp: Enter Font Size 1 (to 3) for text stamp in range of 6.0 to 64.0 pt as necessary.
      Bates Stamp: Enter Font Size 1 (to 3) for bates stamp in range of 6.0 to 64.0 pt as necessary.
3. Click Submit button. To cancel settings, click Back button.

Message Board

This section provides information on how to configure the message board that is shown on the machine’s operation panel of the embedded web server.

Settings

To enable the message board, you must first make settings for the message board.

1. Click Message Board under Management Settings on the navigation menu. The Settings page opens.
2. Click Settings button.
3. To enable the message board, select On and click Submit button. To cancel settings, click Back button.

Adding a Message List

1. Click Add icon. The New Message - Property page opens.
2. You can configure settings for property. This section includes the following items for configuration:
   - **Device to Show**
     Add Operation Panel and/or Command Center RX.
   - **Place to Show**
     You can add Home and/or Login Screen.
   - **Message Type**
     Select a type of message from Normal, Alert, and Prohibition on the drop-down list.
**Priority Show**

Determined whether the message board is prioritized to show. To apply the message board with priority, select **On**.

**Title**

You can enter the title of the message board.

**Body**

Enter the message you want to post on the message board.

3. Click **Submit** button.

**Delete**

1. Click the checkbox to the left of the message list. To select all items at once, click **Check All** icon.
2. Click **Delete** icon once.

**Priority**

You can modify the order of the messages.

1. Click the checkbox to the left of the message list.
2. To give an increased priority for a message, select the message and click **Raise Priority** icon. To give a decreased priority for a message, select the message and click **Lower Priority** icon.

**Reset**

This section includes advanced settings for resetting.

**Restart**

1. Click **Reset** under **Management Settings** on the navigation menu. The **Reset** page opens.
2. Restart the device or network as needed.

**Restart Device**

Clicking **Restart Device** button restarts the machine.

**Restart Network**

Clicking **Restart Network** button restarts only the related network service of the machine.

Note: Some machine products restart the whole network interface integrated in the machine.

**Reset device to factory default**

1. Click **Reset** under **Management Settings** on the navigation menu. The **Reset** page opens.
2. Click Initialize button as needed. The machine is reset to the factory default.
# 11 Troubleshooting

Consult the table below to find basic solutions for problems you may encounter with the embedded server.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Check Items</th>
<th>Corrective Action</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>I can't access the embedded server.</td>
<td>Is the power turned on to this machine?</td>
<td>Turn the power on to this machine, wait until it is in the ready state, and try to access the embedded server.</td>
<td>Operation Guide</td>
</tr>
<tr>
<td>Is the network cable properly connected?</td>
<td>Connect the network cable properly.</td>
<td>Operation Guide</td>
<td>-</td>
</tr>
<tr>
<td>Are the network settings that are made in this machine correct?</td>
<td>Perform the network settings from the operation panel. Contact your network administrator for the appropriate settings.</td>
<td>-</td>
<td></td>
</tr>
<tr>
<td>Is the IP address for this machine entered correctly?</td>
<td>Enter the correct IP address. Check this machine IP address with your network administrator.</td>
<td>-</td>
<td></td>
</tr>
<tr>
<td>Are the LAN settings that are made in web browser correct?</td>
<td>Check the settings made in web browser. Refer to the Help function in your browser.</td>
<td>-</td>
<td></td>
</tr>
<tr>
<td>Has the administrator set up an IP Filter function?</td>
<td>Access the embedded server from an approved IP address.</td>
<td>IP Filter (IPv4) on page 63 IP Filter (IPv6) on page 64</td>
<td>Network Security Settings on page 81</td>
</tr>
<tr>
<td>Is HTTP Security in Serverside Settings of the Security Settings page under Network Security set to Secure Only (HTTPS)?</td>
<td>When HTTP Security is set to Secure Only (HTTPS), specify a URL that begins with https://. You cannot access the embedded server with an “http://” URL.</td>
<td>-</td>
<td></td>
